83C ON BOARD TELEMATIC SYSTEM

Operation	83C-1
System description	83C-5
Central Communications Unit	83C-7
Console	83C-16
Navigation CD-ROM reader	83C-18
Screen	83C-27
Aerial	83C-44
Speaker	83C-49
Initialisation	83C-52
Upgrading the Navigation CD-ROM software	83C-53
Changing the language	83C-54
Relocation	83C-56
Navigation menus	83C-57
Customer complaints	83C-59
Fault finding charts	83C-60
Fault finding log	83C-87

WARNING

With this type of navigation system, it is absolutely essential to wait for the system to shut down completely (approximately **1 minute**) before disconnecting the battery.

The **CARMINAT** system comprises a screen and a voice synthesiser to provide guidance for the driver.

This system can:

- find a specific location, such as:
 - a road, street or avenue,
 - a hotel,
 - public services,
 - a garage or petrol station.
 - etc.
- select guidance modes in order to:
 - optimise journey time,
 - select the shortest distance,
 - plan a route travelling on main roads,
 - or take the scenic route,
 - avoid tolls.

Each mode is symbolised by a different icon that appears on the state line on the lower part of the screen.

- store addresses in the address book.
- display road maps of:
 - the present location,
 - or the destination,
- display trip or arrival time (see **Screen**).
- receive written or spoken messages from the **traffic information** system.

Note:

For information on operating the system and descriptions of the various menus, see the system user's manual.

The Carminat system uses the **Vehicle speed** signal provided by the ABS computer to calculate the distance travelled along with the **Reversing** signal.

A special multiplex network for the "**Carminat**" function connects the navigation computer, Central Communications Unit and screen, Central Display Unit and radio (depending on the vehicle's equipment).

This system uses the following to function:

- a Central Communication Unit (UCC),
- a keyboard (integrated/not integrated into the Central Communication Unit),
- an electronic navigation computer comprising acceleration sensors (gyroscope) and the navigation CD-ROM reader,
- a satellite link (satellite aerial) allowing the vehicle to be located,
- a screen to display written data and maps,
- a speaker for giving voice instructions,
- a CD ROM with the maps of the country the vehicle is delivered to,
- an FM aerial for traffic information messages.
- a Central Display Unit (Mégane II).

NOTE:

- If the vehicle ignition was switched off, it may take the navigation system a few minutes to determine its exact position (see the **Relocation**) section.
- If the vehicle battery has been disconnected, the system may need up to **20 minutes** to calculate its exact location. The vehicle must therefore be outdoors (with the system running) to pick up the satellite signals with the satellite aerial.
- The system can also operate without valid satellite data. Under these circumstances, there may be a loss of precision in pinpointing exact locations.
- Once the exact position has been located by the satellite system, the on-screen satellite symbol turns from red to green.
- When travelling on the motorway, the distance data provided by the system to indicate exits will differ from the information on the signs. This is because motorway signs calculate distance from the start of the motorway exit, while the CARMINAT system calculates from the end of the exit.

BASIC PRINCIPLES OF THE TRAFFIC INFORMATION SERVICE

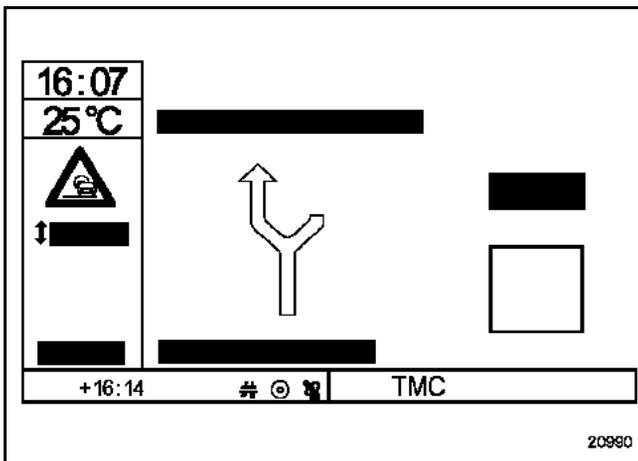

In conjunction with navigation, the system uses information on traffic conditions: **TMC: Traffic Message Channel**.

The system uses:

- the navigation computer which receives, locates and recognises the information received,
- the TMC locators on the cartographic CD-ROM,
- the information collected and disseminated (by public authorities) in RDS - TMC format (communications protocol).

IMPORTANT

RENAULT is not responsible for the information collection and dissemination services in Europe, which are still in development.

Note:

To work, the Navigation CD-ROM software version must be higher than 2000-1.

Traffic information terminal processing reminder:

TMC pictogram display logic:

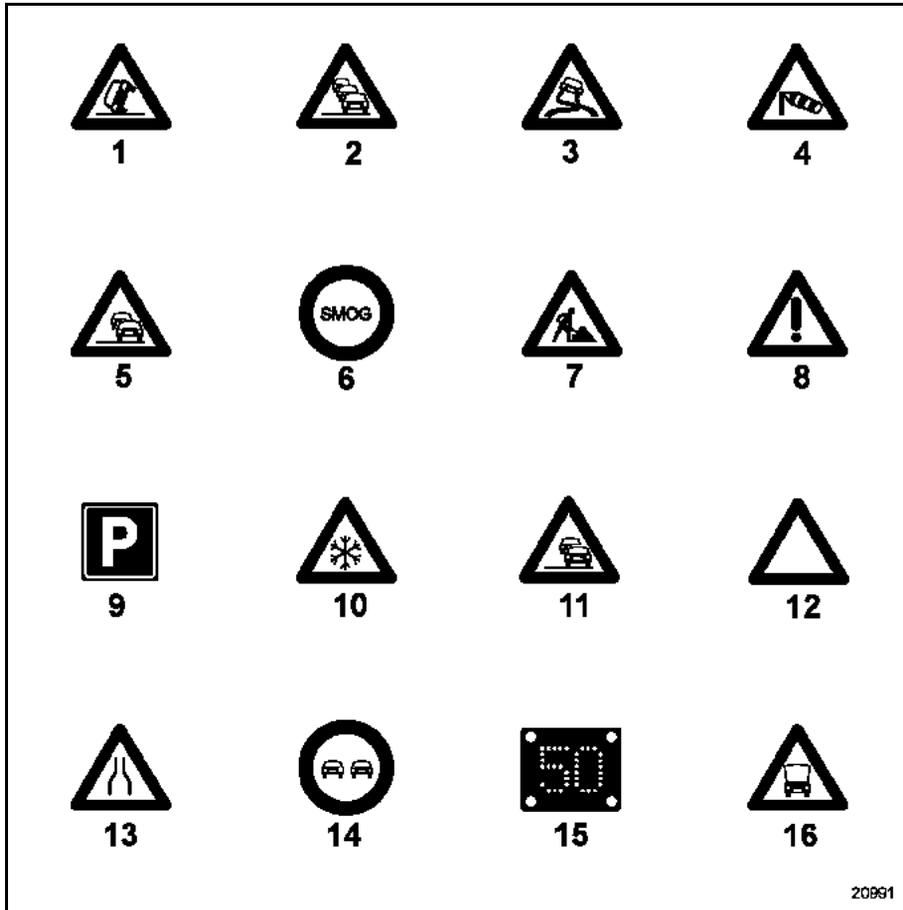

- ⇒ **red** = no traffic information available in this geographic area or poor reception,
- ⇒ **black** = no traffic information locators on the CD-ROM,
- ⇒ **green** = the system is locked onto a frequency that can supply traffic information.

The term **TMC** is replaced by the name of the service operator that the system has locked onto (if the operator uses a name).

The system can display in either text or pictogram form. It suggests a detour if a fault is located on the proposed itinerary.

- The level of disruption is indicated by a "**&Delta**" pictogram.
 - ⇒ **green** = disruption with detour,
 - ⇒ **rouge** = disruption without a detour,
 - ⇒ **red (full)** = very serious disruption within a **31-mile (50-km)** radius.

EXAMPLES OF TRAFFIC INFORMATION PICTOGRAMS

- 1 Accident
- 2 Traffic jam
- 3 Slippery conditions
- 4 Strong winds
- 5 Slow traffic
- 6 Fog
- 7 Road works
- 8 Danger
- 9 Parking possible
- 10 Bad weather
- 11 Slow traffic
- 12 Traffic problems in both directions
- 13 Road partially closed or narrowed
- 14 Vehicle travelling in the opposite direction
- 15 Restricted speed
- 16 Vehicle breakdown

ON-BOARD TELEMATICS SYSTEM

Operating principle

83C

	Map CD-ROM that covers the country	"Spring/summer 2002" version (2002-B)	"Fall 2002/Winter 2003" version (2003-A)	"Spring/summer 2003" version (2003-B)	TMC locator table finding software version ⁽²⁾
France	France ⁽¹⁾	yes	yes	yes	2000-1
Germany	Deutschland ⁽¹⁾	yes (100%)	yes (100%)	yes (100%)	1999-1
Great Britain	UK/Irish Republic	yes (100%)	yes (100%)	yes (100%)	Not applicable
Ireland	UK/Irish Republic	start	yes	yes	Not applicable
SWITZERLAND	Switzerland/ Osterreich	yes	yes (100%)	yes	2001-a
Austria	Switzerland/ Osterreich	yes	yes	yes (100%)	Fall/Winter 2001
Holland	Benelux	yes (100%)	yes (100%)	yes (100%)	1999-1
Spain	Espana/Portugal	yes	yes	yes	Fall/Winter 2001
Italy	Italy ⁽¹⁾	yes	yes	yes	2000-1
Belgium	Benelux	yes	yes	yes (100%)	1999-1
Luxembourg	Benelux	yes	yes	yes (100%)	Not applicable
Portugal	Espana/Portugal	yes	yes	yes	Not applicable
Sweden	Sweden/ Denmark	yes	yes	yes (100%)	Spring/Summer 2002
Denmark	Sweden/ Denmark	yes	yes	yes (100%)	Spring/Summer 2002
Finland	Scandinavia	no	no	start (Helsinki, Tampere)	Not applicable
Norway	Scandinavia	no	no	Akershus and Østfold	Not applicable
Czech Republic	Switzerland/ Osterreich	no	start (Prague + main roads)	2003-A + (Brno, Plzen, Ostrava, Karlovy Vary)	Not applicable
Slovakia	Switzerland/ Osterreich	no	no	start (Bratislava and main roads)	Not applicable
Poland	---	no	no	no	Not applicable
Hungary	---	no	no	no	Not applicable

⁽¹⁾ The France/Germany/Italy border zones are available on the "Switzerland/Osterreich" CD-ROM.

⁽²⁾ The TMC locator tables enable drivers to receive traffic information if it is broadcast in the country concerned (more specifically, they enable the broadcast events to be located on the map).

ON-BOARD TELEMATICS SYSTEM

Description of the system

83C

WARNING

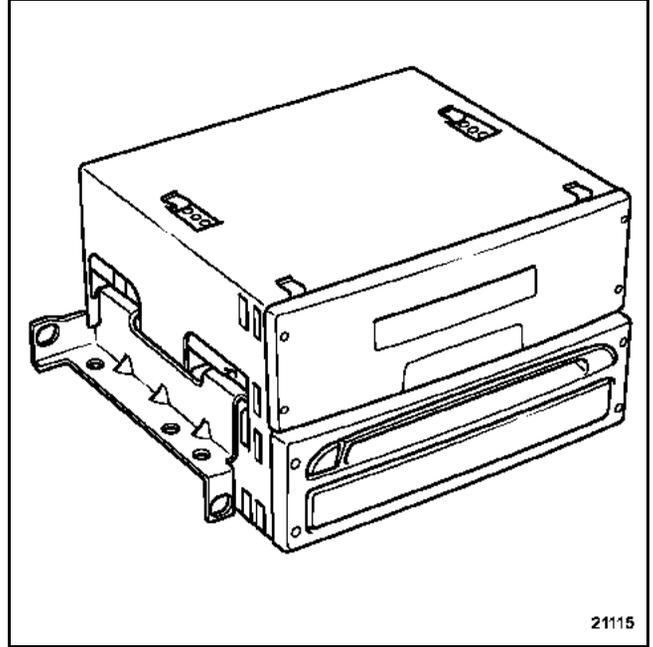

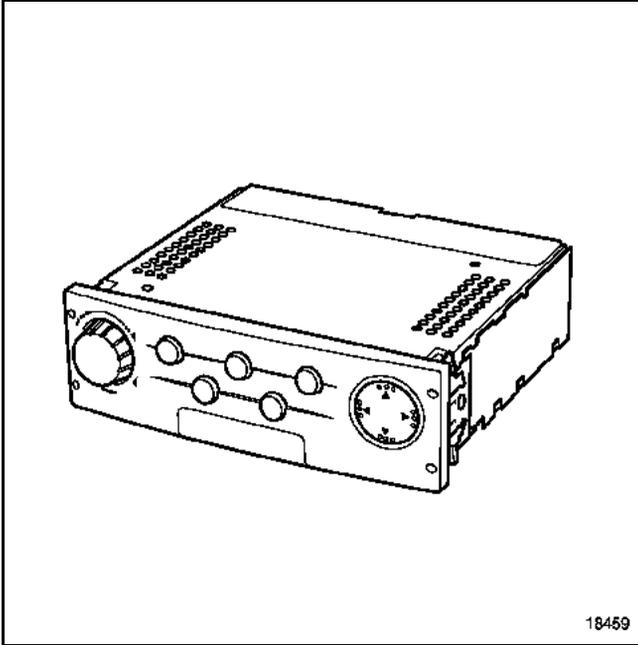

When replacing a navigation system component, it is essential to check that the software is compatible with the navigation CD-ROM reader, the Central Communications Unit, and the languages CD-ROM.

System software version	Central Communications Unit version read from menus	Navigation CD-ROM reader version read from menus	Languages CD-ROM	Application	Notes on Changes
2 "A" SECOND LABEL	2.4	nav: 0182 csb: 1.80 or 1.82	2.5 ⁽¹⁾	03/2001	-
2 TER ⁽²⁾		nav: 0196 csb: 1.80 or 1.82	2.5 ⁽¹⁾	01/2003	● new traffic information messages
3	3.63	nav: 0304 csb: 3.00	3.0 ⁽¹⁾	01/2002	● alternative route suggestion ● new rotary knob functions
3 "A" SECOND LABEL	3.67	nav: 0350 csb: 3.00 or 3.01	3.5 ⁽¹⁾	-	-
3 TER	-	never used	-	-	-
3 QUATTRO ⁽²⁾	3.67	nav: 0376 csb: 3.00 or 3.01	All versions CD-ROM	01/2003	● new traffic information messages
4	4.51	nav: 0434 csb: 4.31 or 4.32	4.0 ⁽¹⁾	10/2002	● screen watch
4 BIS ⁽²⁾	4.60	nav: 0457 csb: 4.31 or 4.32	All versions CD-ROM	02/2003	● new traffic information messages
4 TER	-	-	-	04/2003	● restricted access

⁽¹⁾ "NAV5 Languages All Versions CD" compatible.

⁽²⁾ Software upgrade using the "NAV5 Languages All Versions CD".

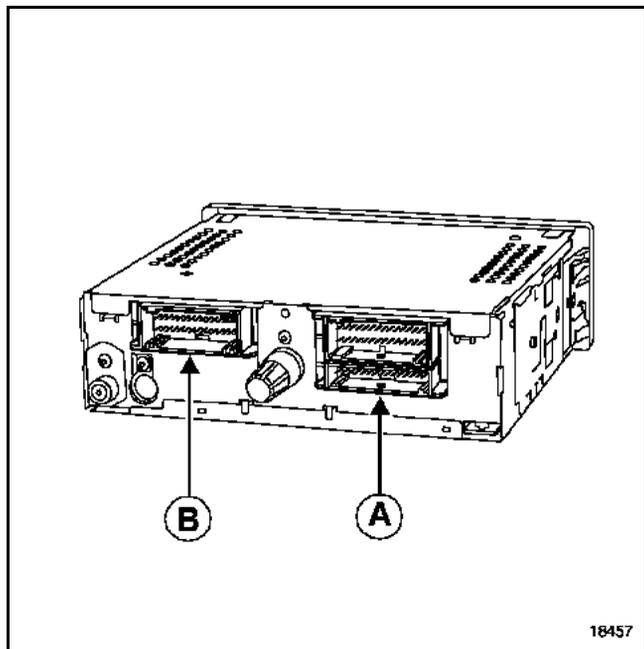

Depending on the vehicle, the Central Communications Unit may have a keyboard.

The Central Communication Unit can:

- adjust the clock,
- act as a go-between for the vehicle's multiplex network and the Carminat system network,
- use multiplex data (depending on the vehicle),
- select commands with the radio knob or keyboard (depending on the vehicle equipment),
- control braking conditions, and the vehicle and system configurations,
- control the screen display (with the navigation CD-ROM reader),
- receive written or spoken messages from the **traffic information** system (via the aerial)
- manage voice synthesiser and navigation messages,
- transfer data from the radio for display.

CONNECTIONS

CLIO II

REMOVAL

The Central Communication Unit is located underneath the front right-hand seat.

WARNING

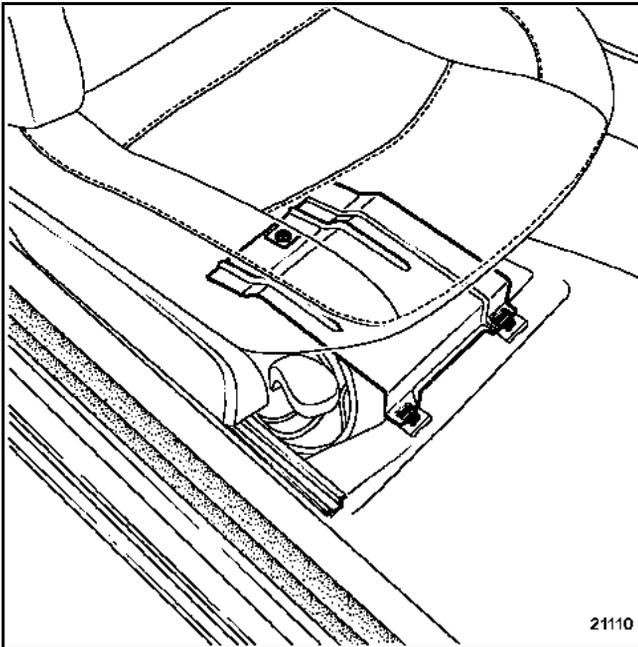

Wait until the system has shut down completely (**1 minute**) before disconnecting the battery.

Note:

It is not necessary to remove the seat.

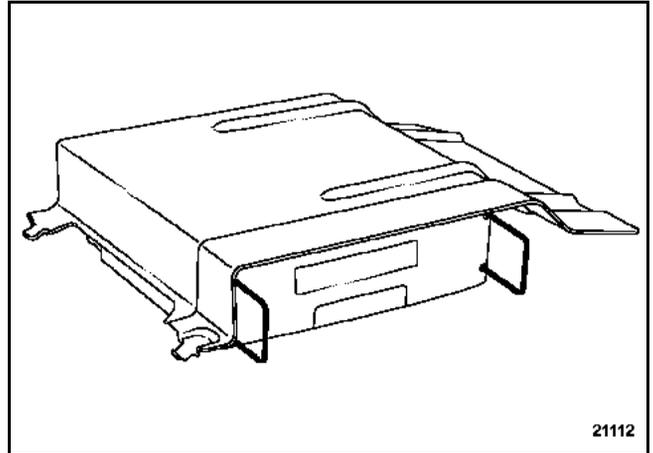

Move the seat as far back as possible.

Remove the rear mounting bolt on the support and raise the rear section.

Disconnect the connectors and remove the assembly.

Remove the Central Communications Unit using the radio removal tools (Ms. 1373).

REFITTING

Position the Central Communications Unit in its mounting.

Connect the connectors.

Insert the front mounting guides into their housings.

Position the mounting and the mounting bolts.

Initialise the system (refer to the **Initialisation** section).

MEGANE - SCENIC - SCENIC II

REMOVAL

WARNING

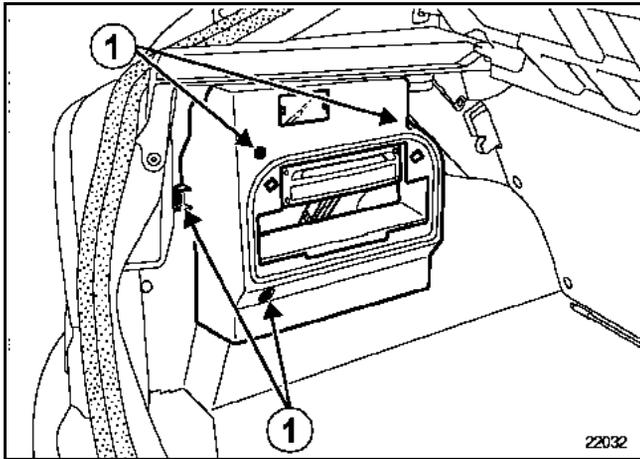

Wait until the system has shut down completely (**1 minute**) before disconnecting the battery.

The Central Communication Unit is located in the luggage compartment, above the CD ROM reader, behind the cover.

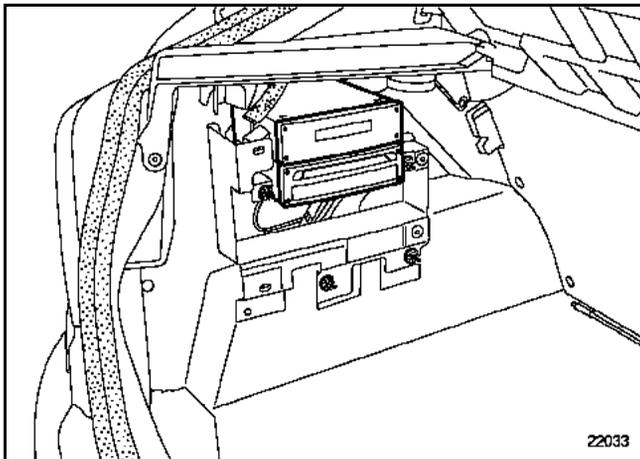

Special notes on the Mégane

Remove the cover mounting bolts (1).

Remove the cover.

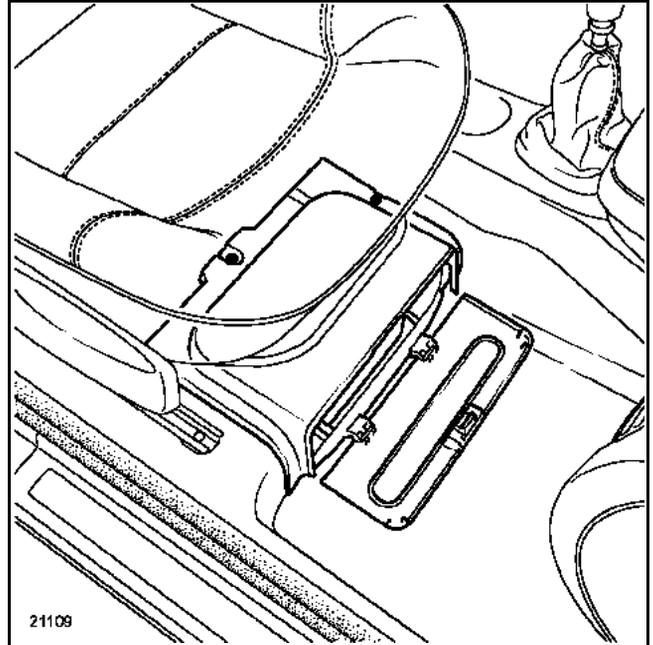

Remove the Central Communications Unit using the radio removal tools (Ms. 1373).

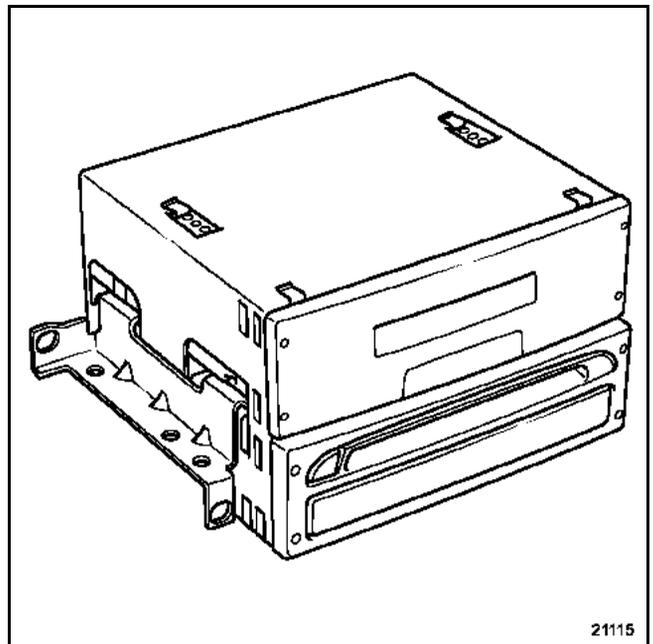

Special notes on the Scénic and Scénic II

The Central Communication Unit is located underneath the front right-hand seat.

Note:

It is not necessary to remove the seat.

REFITTING

Initialise the system (refer to the **Initialisation** section).

MEGANE II

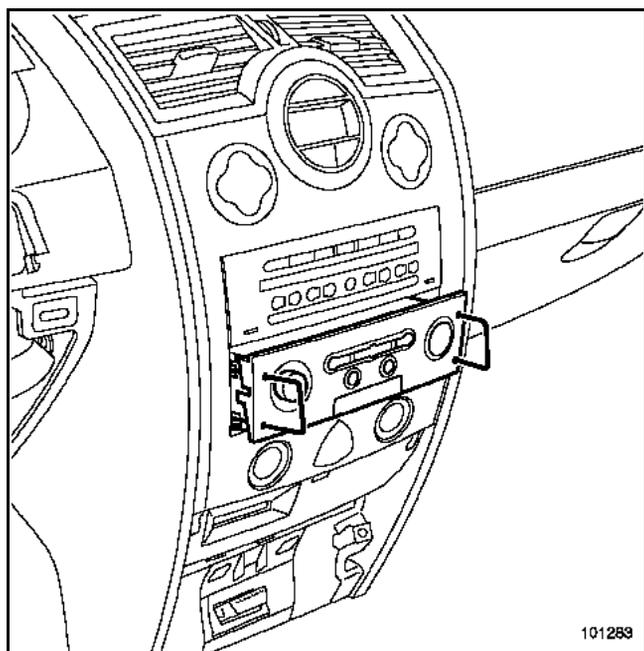

REMOVAL

The Central Communications Unit is installed in the dashboard. It incorporates the keyboard.

WARNING

Wait until the system has shut down completely (**1 minute**) before disconnecting the battery.

Remove the Central Communications Unit using the radio removal tools (Ms. 1373).

Disconnect the connectors and remove the assembly.

REFITTING

Connect the connectors.

Insert the guides into their positions.

Position the Central Communications Unit in its mounting.

Initialise the system (refer to the **Initialisation** section).

LAGUNA II - TRAFIC II - AVANTIME

REMOVAL - REFITTING

WARNING

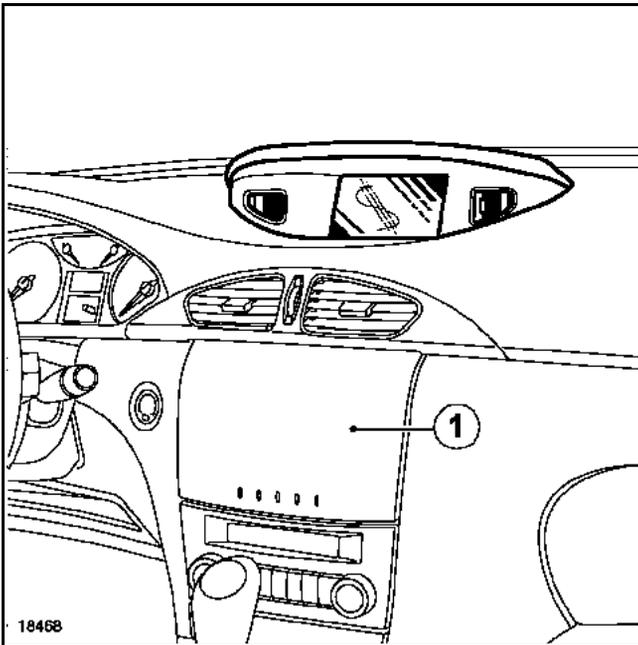

Wait until the system has shut down completely (**1 minute**) before disconnecting the battery.

The Central Communication Unit is removed with the radio removal tools (Ms. 1373).

After refitting, initialise the system (refer to the **Initialisation** section).

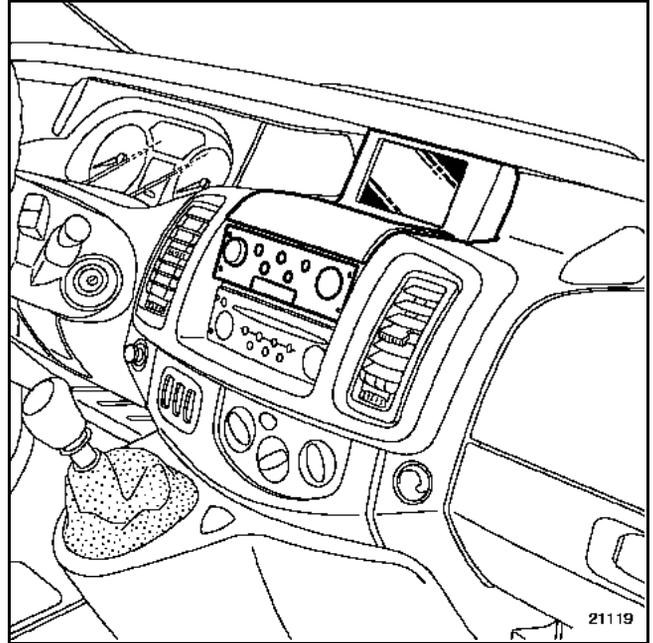

Special notes on the Laguna II

The Central Communication Unit (1) is located above the radio or CD ROM reader.

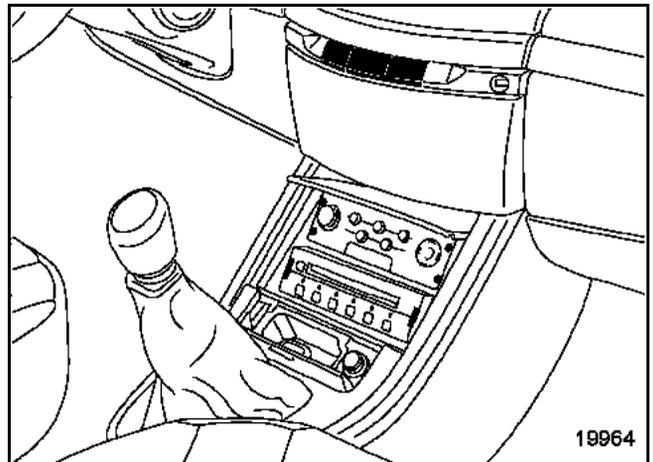

Special notes on the Trafic II

The Central Communication Unit is located above the radio.

Special notes on the Avantime

The Central Communication Unit is located at the front of the dashboard above the CD changer.

VEL SATIS

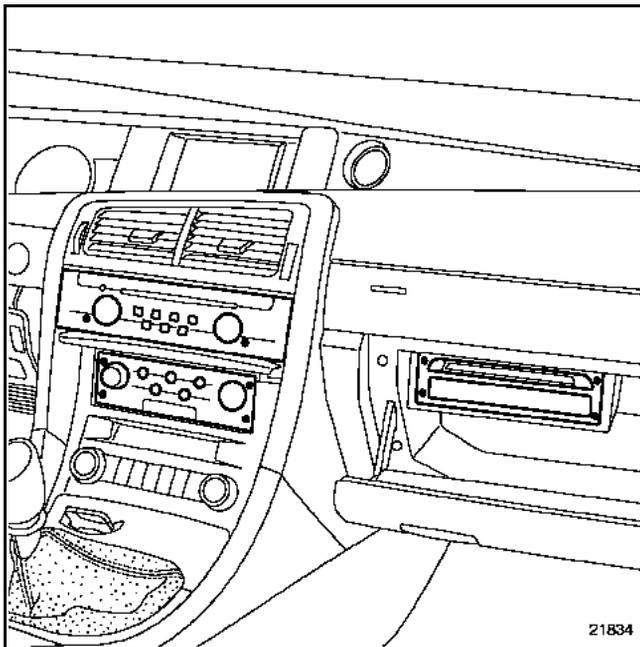

REMOVAL

The Central Communication Unit is located behind the cover, under the radio or CD changer.

WARNING

Wait until the system has shut down completely (**1 minute**) before disconnecting the battery.

Removal is carried out using tool Ms. 1373.

REFITTING

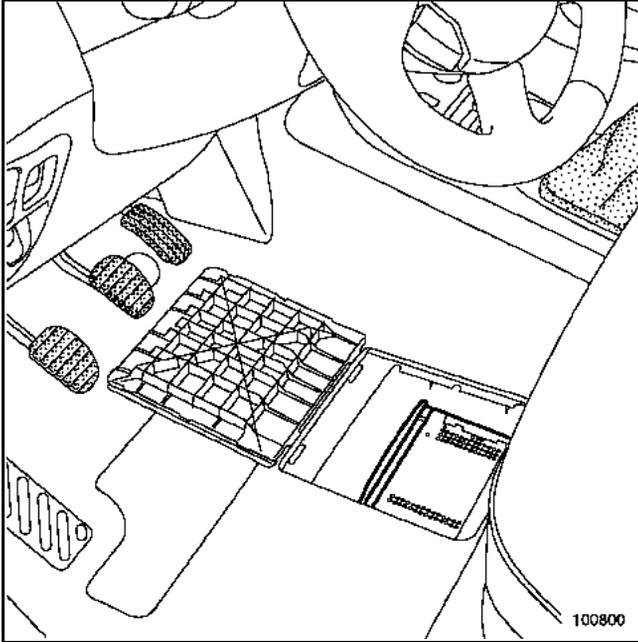

Initialise the system (refer to the **Initialisation** section).

ESPACE IV

REMOVAL

The Central Communications Unit is located in the front left glovebox.

Removal is carried out using tool Ms. 1373.

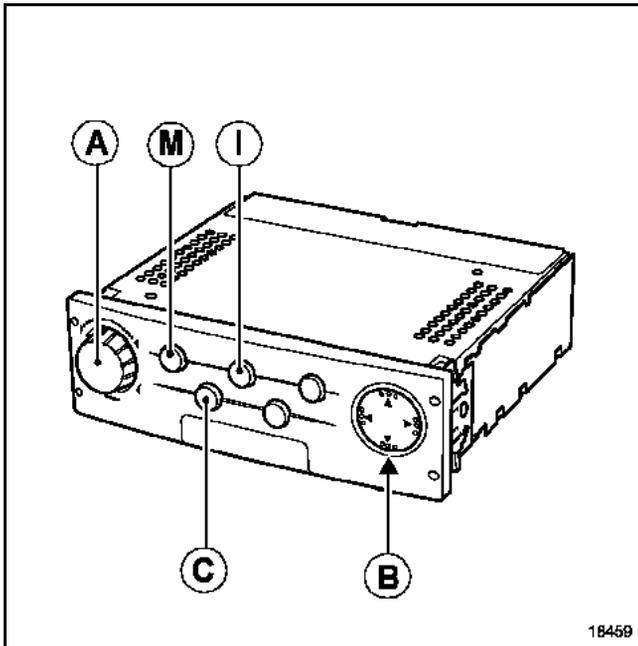

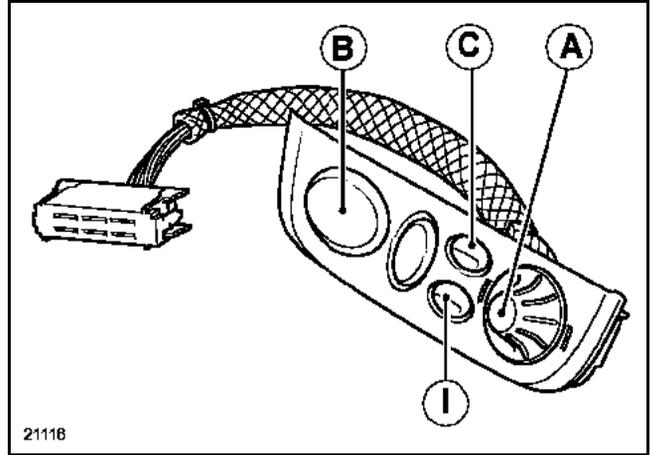

REFITTING

Initialise the system (refer to the **Initialisation** section).

The keyboard may be integrated into the Central Communication Unit or independent, depending on the vehicle.

It comprises:

- a rotary knob (**A**) for:
 - navigating the various menus,
 - confirming,
- a navigation cell (**B**) for:
 - scrolling through the menu in manual mode,
 - select options in the different menus,
- a menu button (**M**) (depending on the vehicle) for returning to the main menu,
- a button (**I**) for replaying voice messages,
- a button (**C**) for turning off voice messages,
- buttons (+) and (-) which increase and reduce the volume of audio messages.

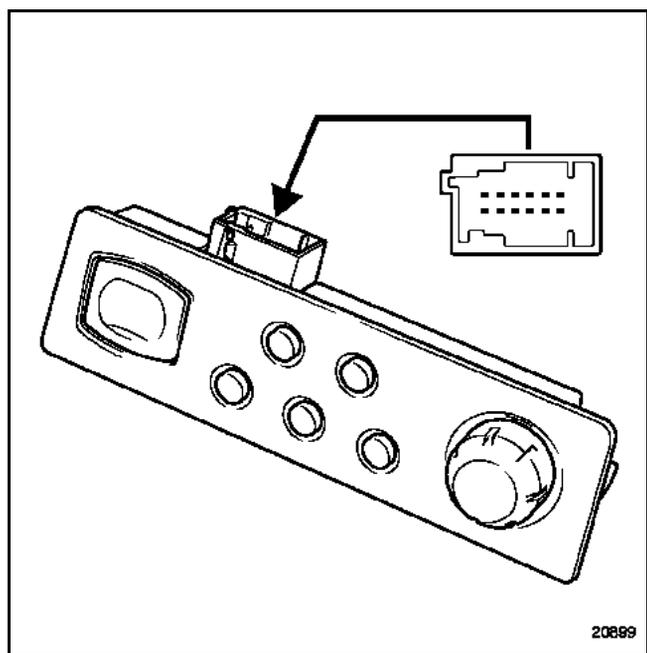

SPACE IV - CLIO II - MEGANE - SCENIC - SCENIC II

The independent keyboard is connected to the Central Communication Unit by a special **12-track** connector.

Note:
Only the feeds and earths can be checked.

CONNECTION

Special notes on Clio II, Scénic II and Espace IV

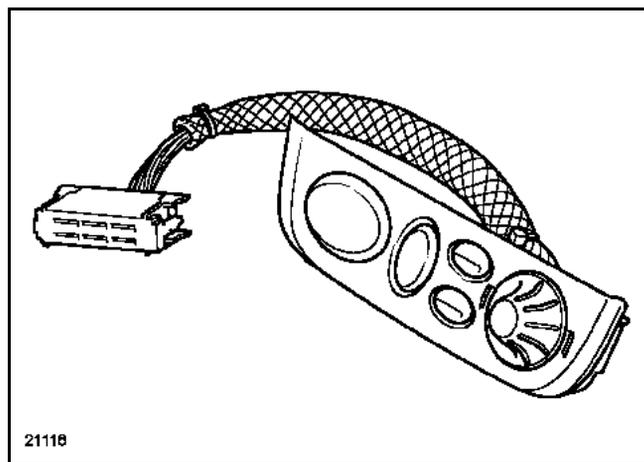

Track	Description
1	Rotary knob at left
2	+ Lighting
3	Push-button
4	Push-button
5	Keyboard earth
6	Confirmation switch
7	Rotary knob at right
8	+ rotary knob
9	Rotary knob earth
10	Keyboard earth
11	Push-button
12	Push-button

Special notes on the Mégane and Scénic

The keyboard is clipped below the screen.

It is necessary to remove the upper section of the dashboard and the screen to reach the connector.

The navigation CD-ROM reader works by using sensors that detect vehicular motion. The car's tachometric (or ABS) sensor calculates the distance travelled while the gyroscope registers turns.

By making comparisons with the digital map (on the CD-ROM), the system corrects inaccuracies (tyre pressure and wear, temperature etc.) to pinpoint the vehicle's location.

IMPORTANT

If the battery has been disconnected or the navigation computer replaced, relocation of the vehicle is automatic (refer to the **Relocation** section).

The system will be programmed in French by default after the navigation CD-ROM reader has been replaced.

To change language, see **Language Settings**.

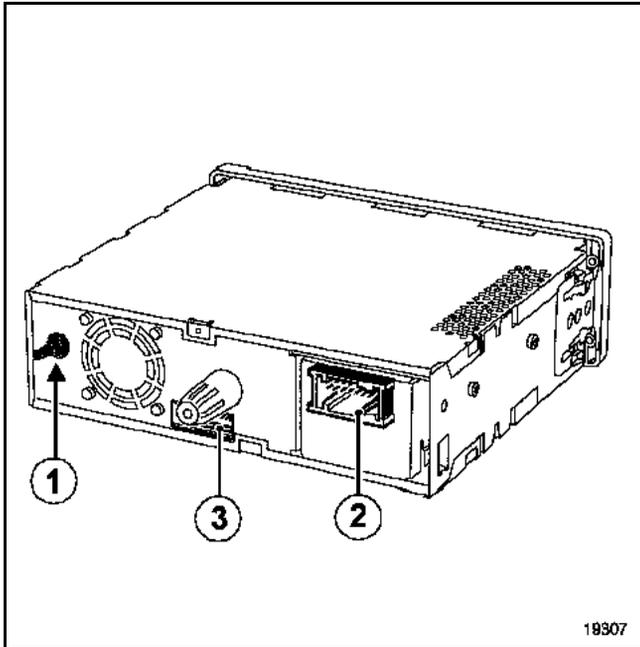

WARNING

When the navigation CD-ROM reader is replaced, the addresses stored in the old unit cannot be recovered.

Note:

- With the ignition off, the CD-ROM player lights up automatically when the eject button is pressed and will remain lit for about **1 minute** (if the ignition is not switched back on).
- The player lights up automatically when the ignition is turned on.
- After the ignition is turned off, it remains lit for **approximately 1 minute, during which time the battery must not be disconnected**.
- The navigation CD-ROM readers differ, depending on whether installed horizontally or vertically.

CONNECTIONS

(1) Satellite aerial connection

18-track connector (2) to the vehicle:

Track	Description

CLIO II - TRAFIC II

REMOVAL - REFITTING

WARNING

Wait until the system has shut down completely (**1 minute**) before disconnecting the battery.

WARNING

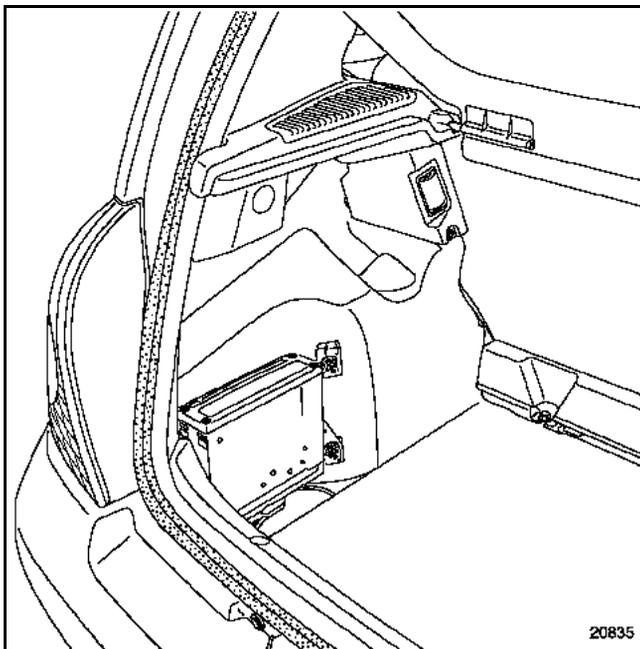

The **satellite** aerial wire is very fragile. Do not bend or trap it.

After refitting, initialise the system (refer to the **Initialisation** section).

Special notes for Clio II

The navigation CD-ROM reader is in the luggage compartment (left side).

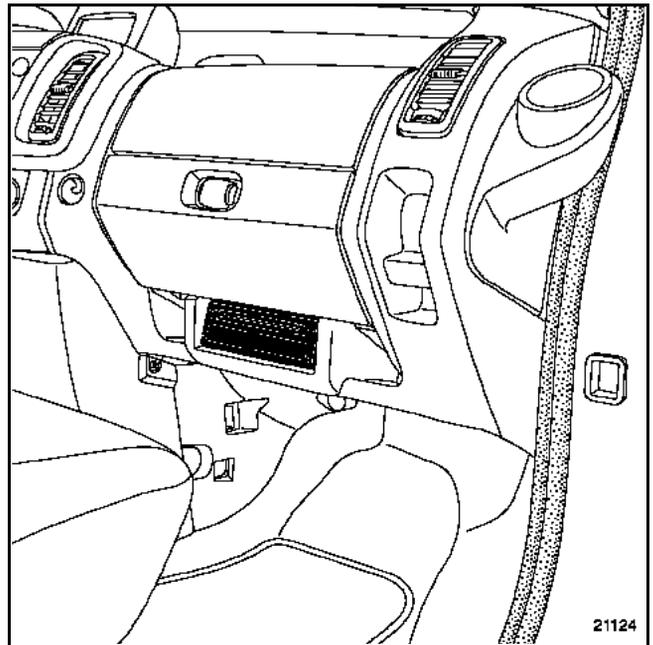

It is removed with the radio removal tools (Ms. 1373).

Special notes on the Trafic II

The navigation CD-ROM reader is in the lower section of the dashboard.

It is removed with the radio removal tools (Ms. 1373).

SCENIC

REMOVAL

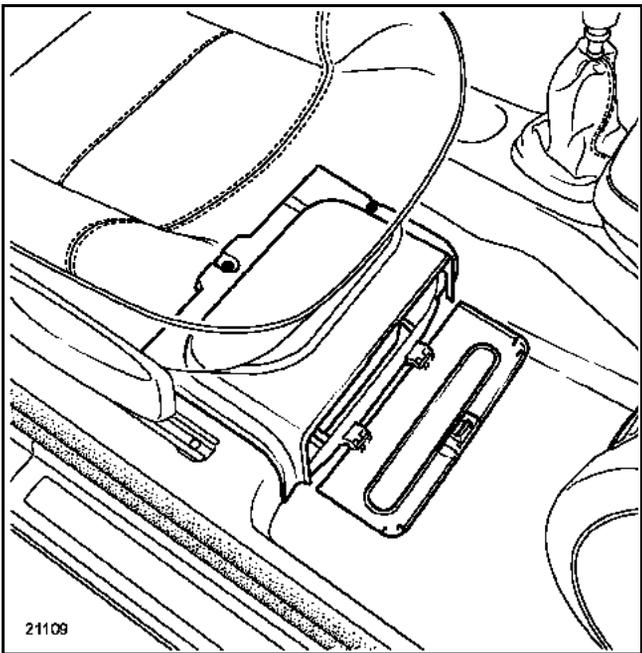

The navigation CD-ROM reader is under the Central Communications Unit below the right front seat.

WARNING
Wait until the system has shut down completely (1 minute) before disconnecting the battery.

Note:
It is not necessary to remove the seat.

Move the seat as far back as possible.

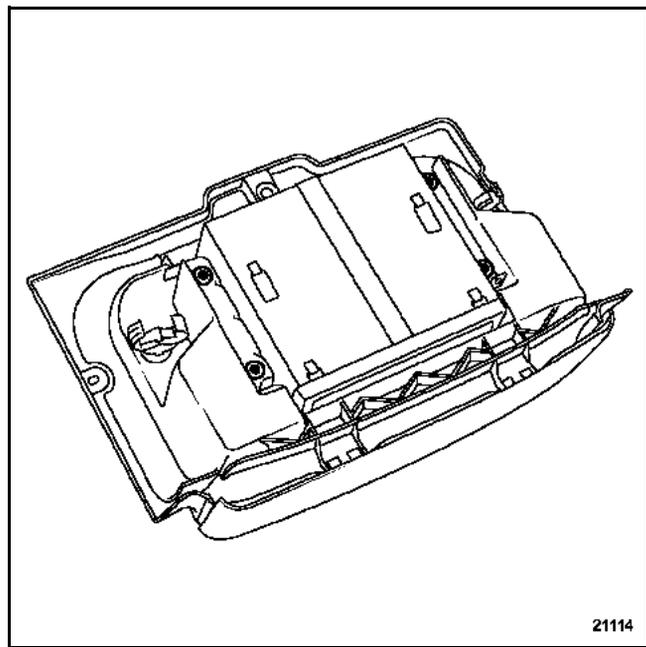

Remove the compartment mounting bolts and unclip it.

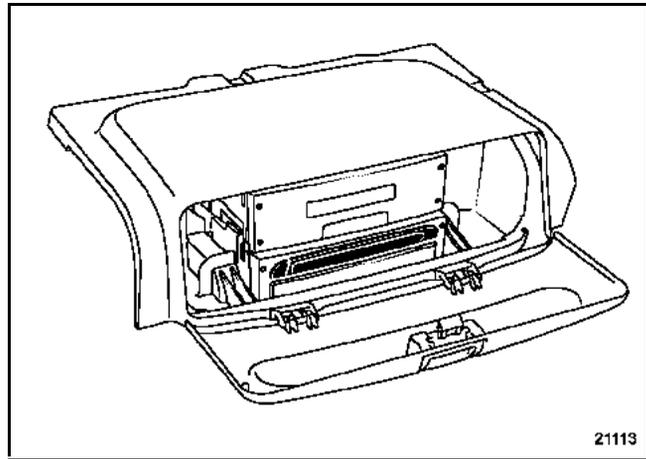

Pull the assembly forwards and disconnect the connectors.

WARNING
The **satellite** aerial wire is very fragile. Do not bend or trap it.

Remove:
– both support mounting bolts on the casing.

Remove:
– the computer using tools Ms. 1373.

REFITTING

Proceed in the reverse order to removal.

After refitting, initialise the system (refer to the **Initialisation** section).

MEGANE II

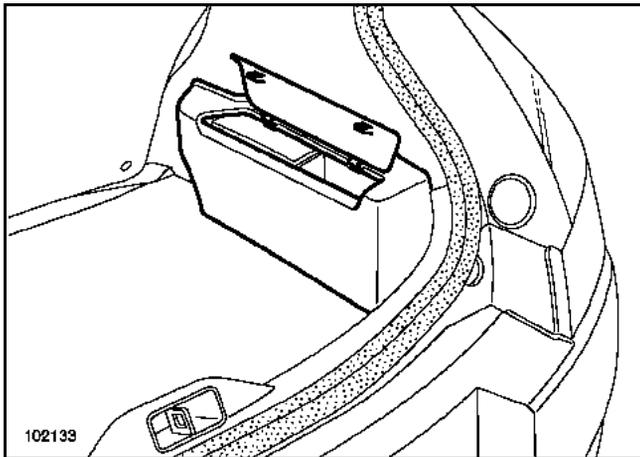

WARNING

Wait until the system has shut down completely (**1 minute**) before disconnecting the battery.

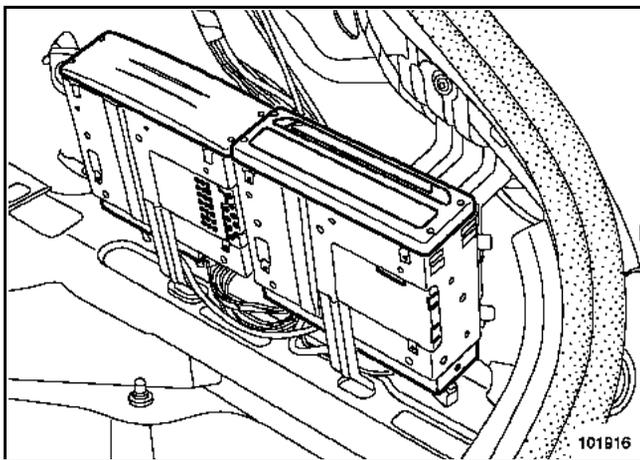

REMOVAL

The navigation CD-ROM reader is located in the luggage compartment, next to the amplifier, behind the cover.

Remove the cover clipped to the carpet.

Remove the CD-ROM reader with the radio removal tools (Ms. 1373)

Disconnect the connectors and remove the assembly.

WARNING

The **satellite** aerial wire is very fragile. Do not bend or trap it.

REFITTING

Insert the guides into their positions.

Connect the connectors.

Place the navigation CD-ROM reader in its mounting.

Initialise the system (refer to the **Initialisation** section).

LAGUNA II

REMOVAL

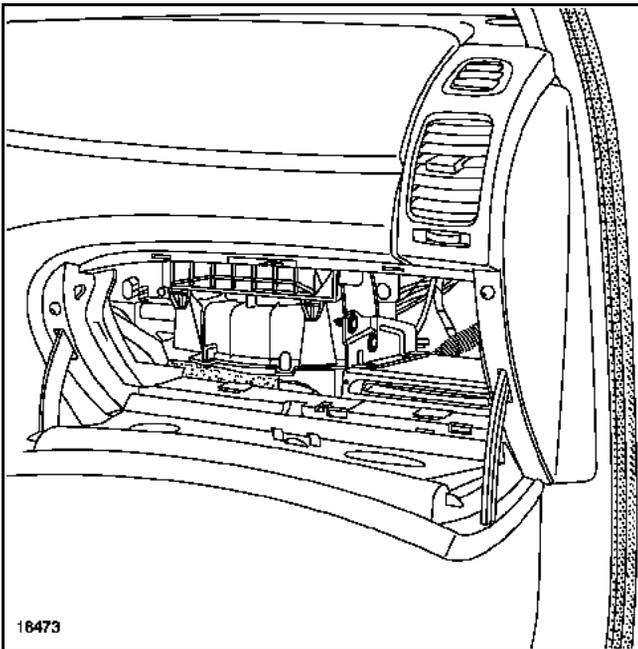

WARNING

Wait until the system has completely shut down (**1 minute**) before disconnecting the battery.

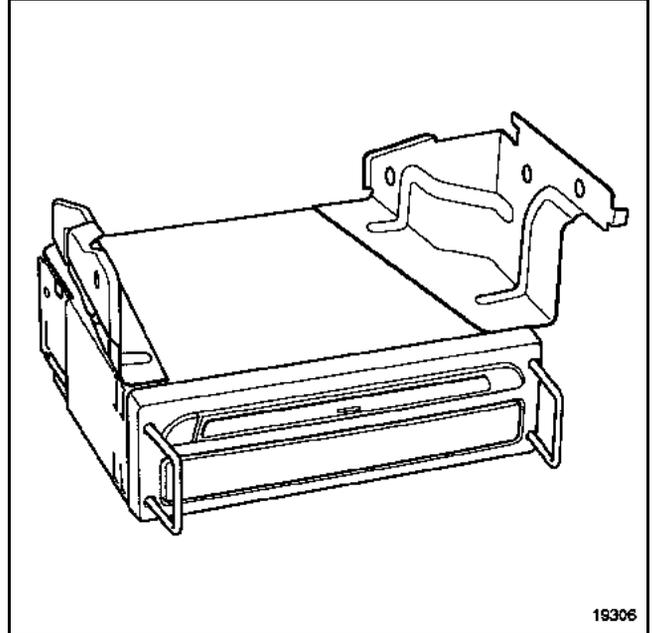

Remove:

- the glove compartment cover secured by a screw,
- the computer support mounting bolts.

Disconnect the navigation CD-ROM reader connectors and lower the unit.

Detach the support from the computer using the radio removal tools (Ms. 1373).

WARNING

The **satellite** aerial wire is very fragile. Do not bend or trap it.

REFITTING

Proceed in the reverse order to removal.

After refitting, initialise the system (refer to the **Initialisation** section).

MEGANE - AVANTIME - SCENIC II

REMOVAL - REFITTING

WARNING

Wait until the system has completely shut down (**1 minute**) before disconnecting the battery.

WARNING

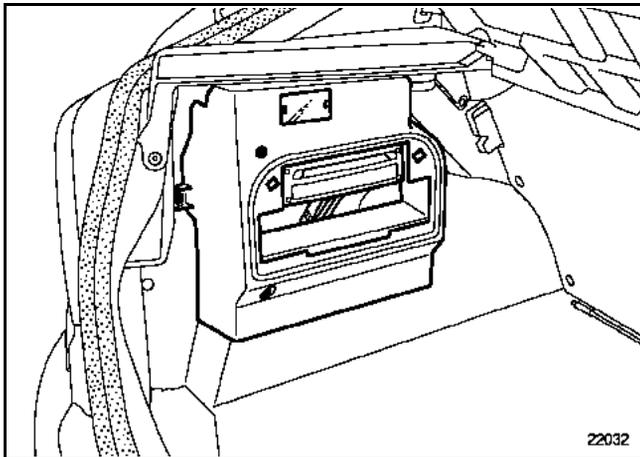

The **satellite** aerial wire is very fragile. Do not bend or trap it.

After refitting, initialise the system (refer to the **Initialisation** section).

Special notes on the Mégane

The navigation CD-ROM reader is in the luggage compartment (left side).

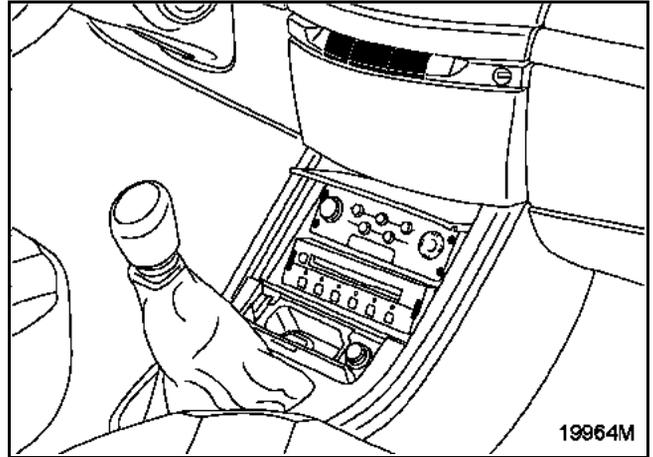

It is removed with the radio removal tools (Ms. 1373).

Special notes on the Avantime

The navigation CD-ROM reader is located in the glovebox (passenger's side).

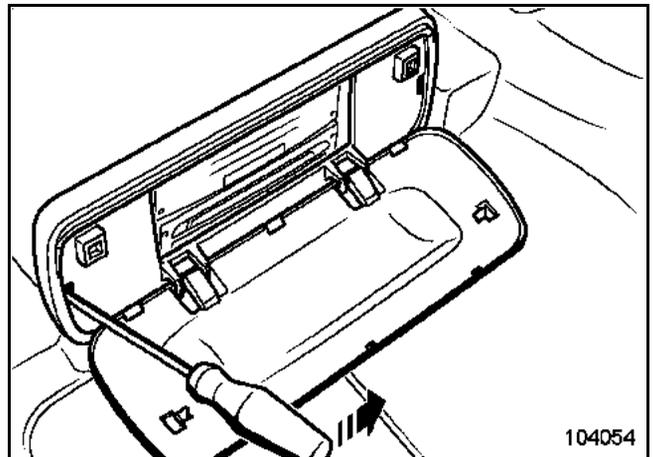

It is removed with the radio removal tools (Ms. 1373).

Special notes on the Scénic II

The navigation CD-ROM reader is located underneath the right front seat.

It is removed with the radio removal tools (Ms. 1373).

Note:

It is not necessary to remove the seat.

VEL SATIS

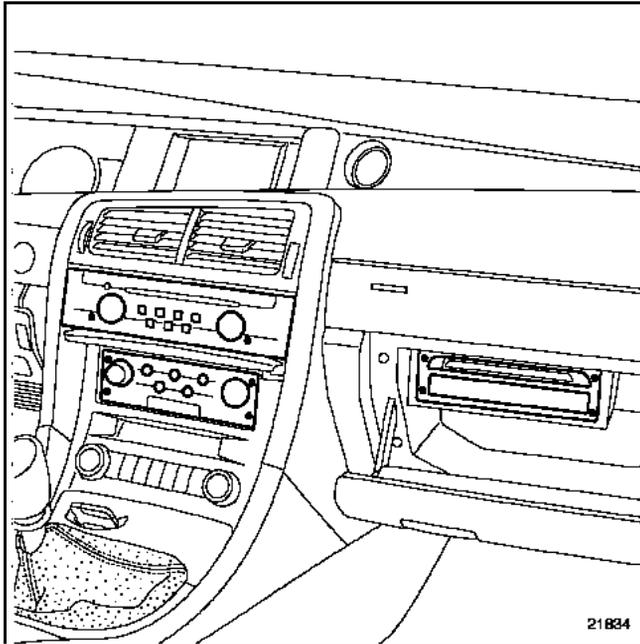

REMOVAL

The navigation CD-ROM reader is located in the glovebox.

WARNING

Wait until the system has completely shut down (**1 minute**) before disconnecting the battery.

Removal is carried out using tool Ms. 1373.

REFITTING

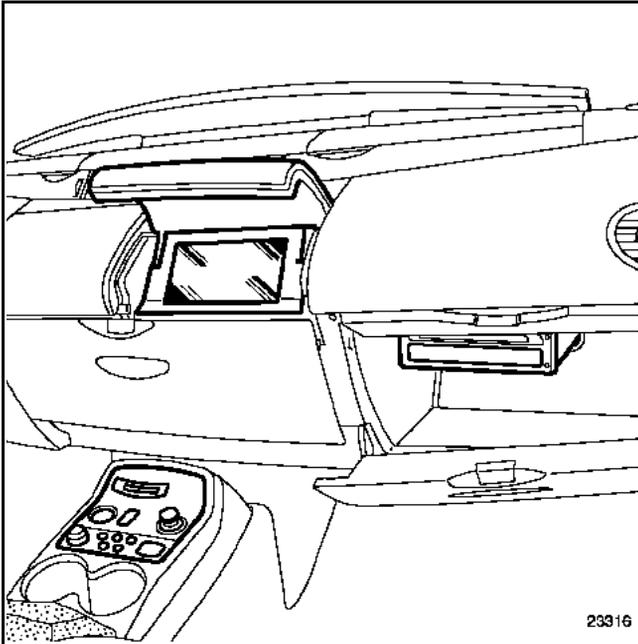

Initialise the system (refer to the **Initialisation** section).

ESPACE IV

REMOVAL

The navigation CD-ROM reader is located in the glovebox.

Removal is carried out using tool Ms. 1373.

REFITTING

Initialise the system (refer to the **Initialisation** section).

The screen can display:

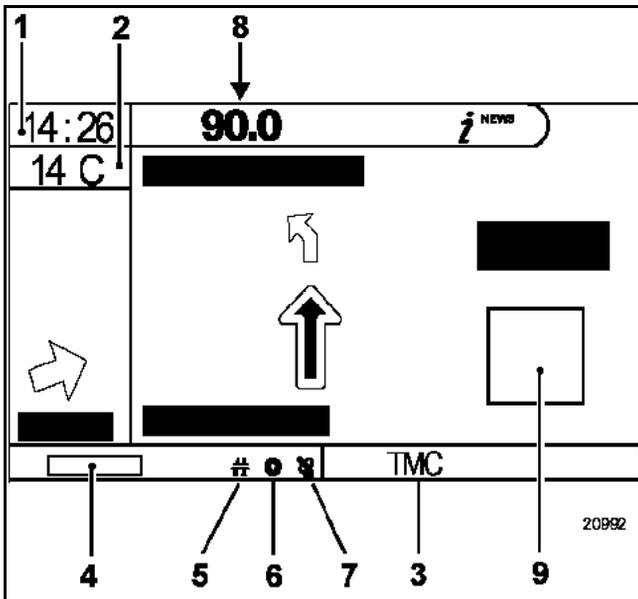

- the various menus,
- the destination direction,
- the distance from the destination,
- the journey maps,
- the distance remaining until the next change of direction,
- the road maps,
- etc.

It lights up a few seconds after +accessories is switched on or the radio is switched on and displays the security message.

It goes out approximately **45 seconds** after the ignition is switched off.

Note:
The screen colour and brightness can be adjusted using the **Screen configuration** menu:

- daytime blue or dark blue (side lights).
- night time blue or dark blue (side lights on).

- 1 Time
- 2 External temperature
- 3 **Traffic Information** message pictogram
- 4 Time of arrival or journey remaining (can be configured)
- 5 **Guidance mode** pictogram
- 6 **Disc present** pictogram
- 7 **Satellite reception quality** pictogram
- 8 **Radio** display (depending on the vehicle)
- 9 Tyre pressure monitor and opening elements (depending on the vehicle)

Special notes on the radio (depending on the vehicle)

If the vehicle is fitted with an original radio, the display will appear on the screen bar (radio on only).

When the radio is being adjusted, the radio display fills the screen (for greater visibility) in **list** or **preset** mode.

Note:
If the radio information does not appear on screen, refer to the "**Initialisation**" section.

Special notes on the clock

The clock is connected to the satellite link (GPS). The reference time is adjusted manually via the **Clock** menu, but the satellite connection allows precise adjustment.

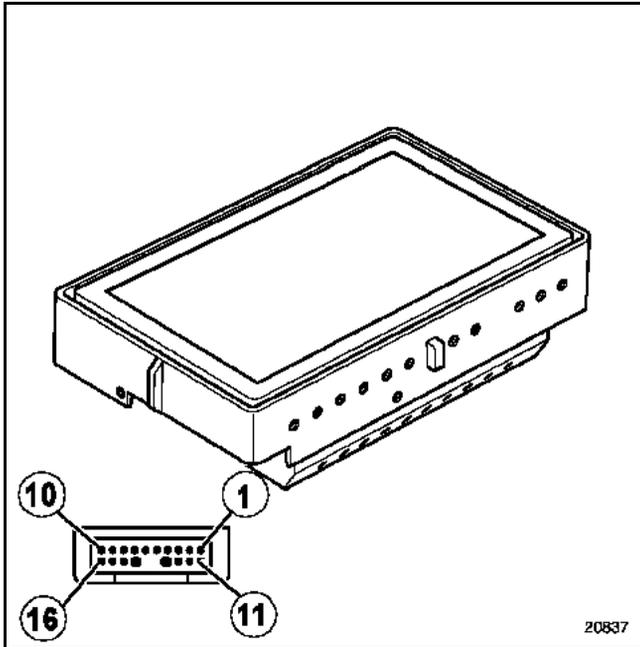

WARNING

Do not use cleaning products to clean the screen. It should be wiped with a soft, dry cloth or a damp cloth.

CLIO II

REMOVAL - REFITTING

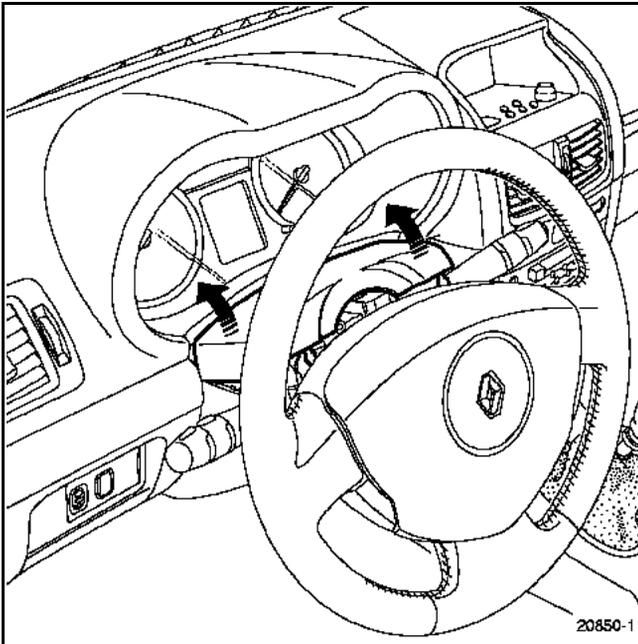

With the ignition switched off, position the steering column to a low setting.

Unclip and disconnect the control keyboard (1).

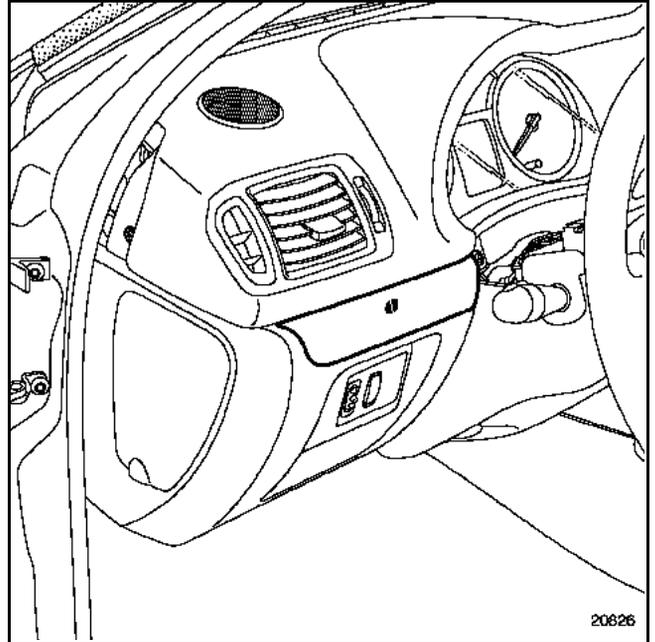

Remove:

- the steering wheel casing mounting bolts,
- the steering wheel upper cowling,
- the bolts.

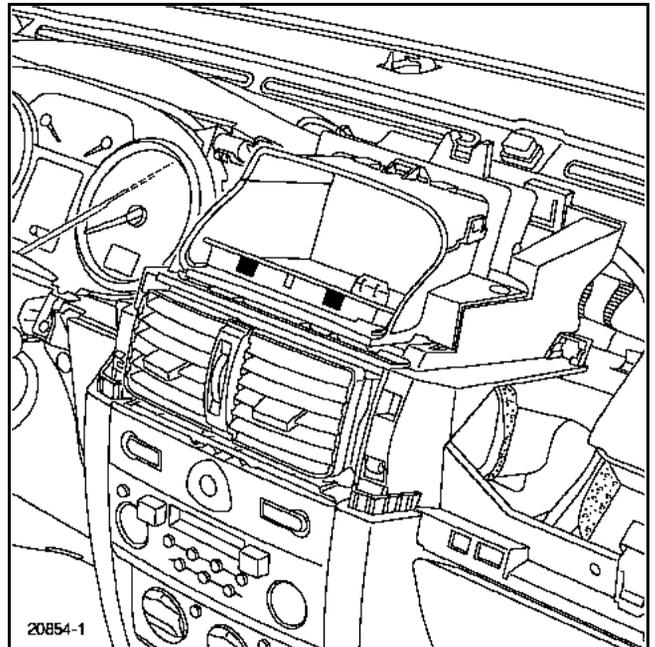

Remove:

- the trim strips,
- the dashboard mounting bolts.

Remove:

- the upper section of the dashboard,
- the screen and its mounting.

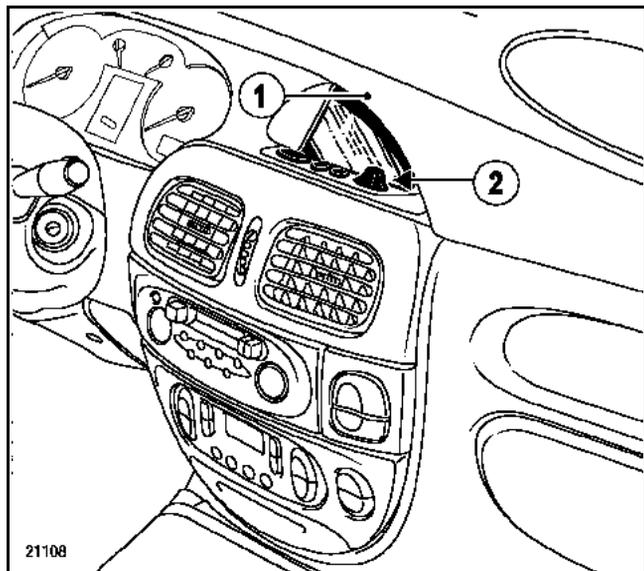

MEGANE - SCENIC

REMOVAL - REFITTING

With the ignition switched off, position the steering column to a low setting.

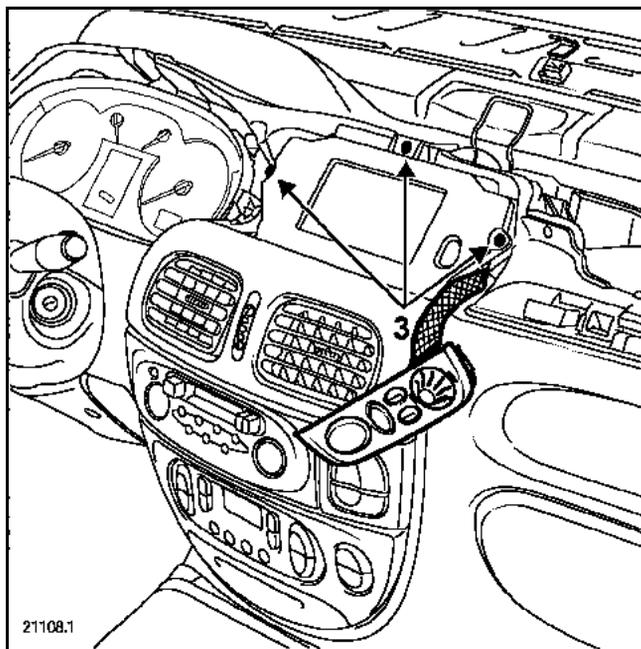

Unclip the CARMINAT speaker support (1) and the control keyboard (2).

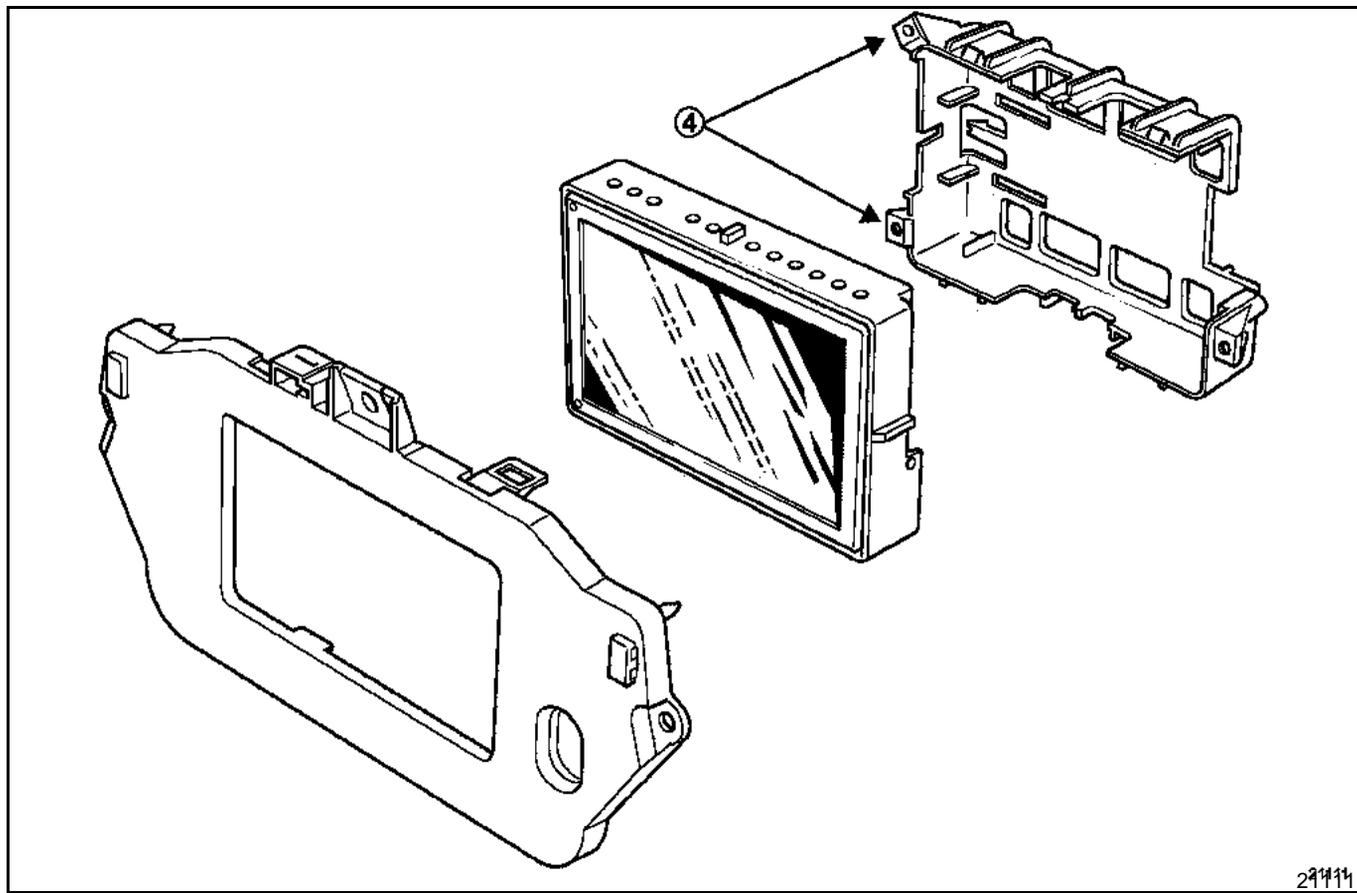

Remove:

- the speaker grilles,
- the upper section of the dashboard,
- the screen mounting bolts (3).

Disconnect the screen and the keyboard.

Separate the screen from its mounting by removing the screws (4).

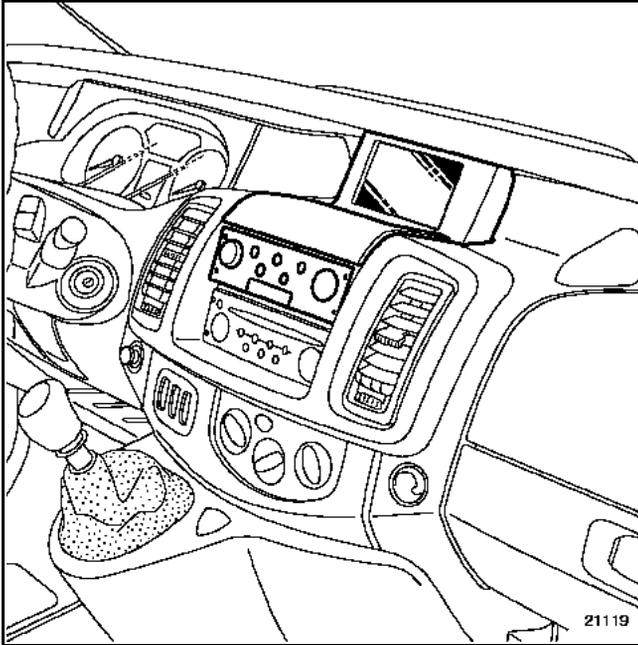

TRAFIC II

REMOVAL - REFITTING

With the ignition off, remove:

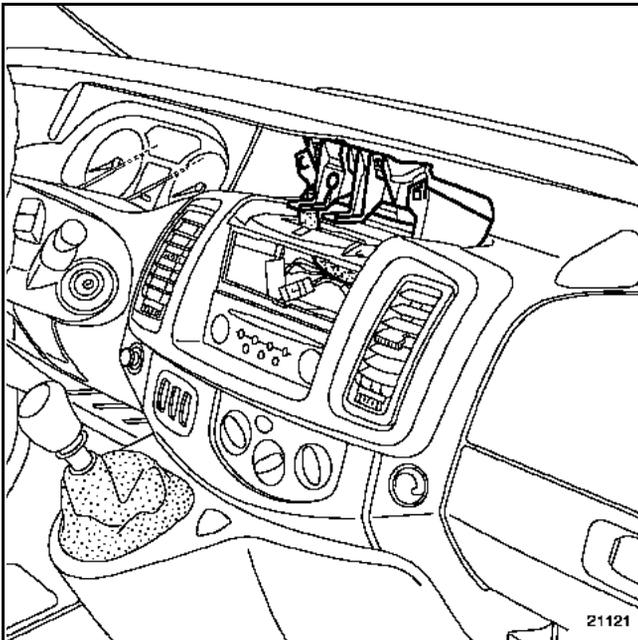

- the Central Communication Unit using the Ms. 1373 tools.

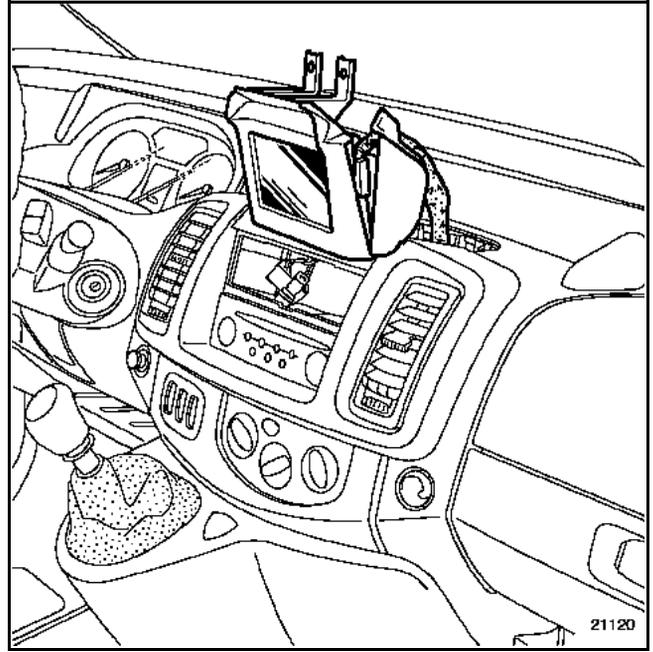

Remove:

- the screen mounting bolts.

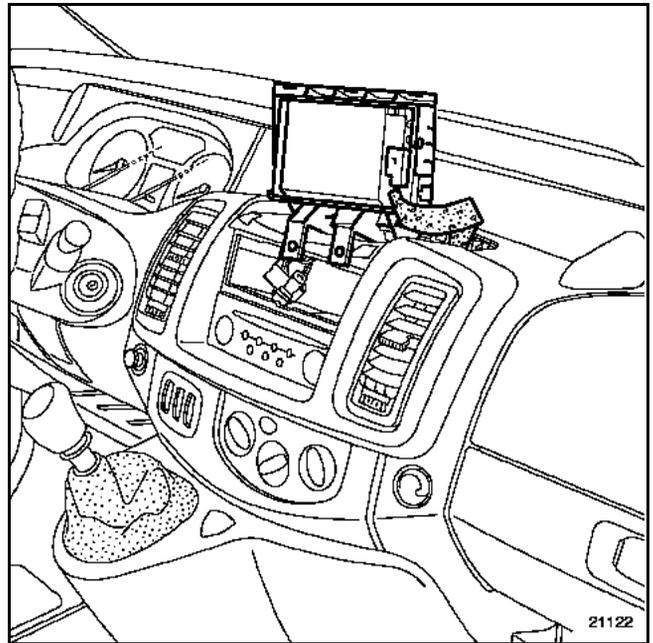

Pull out the screen to unclip it from the dashboard.

Swivel the screen, taking care not to scratch the dashboard.

Open the protective housing.

Disconnect the connector by pressing on the bolt.

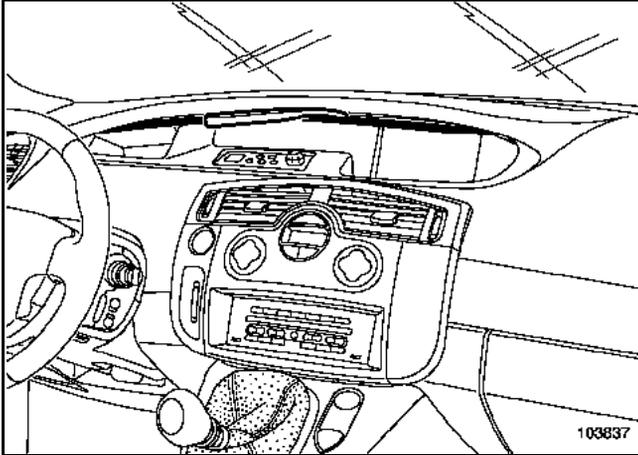

Separate the screen from its mounting by removing the screws.

SCENIC II

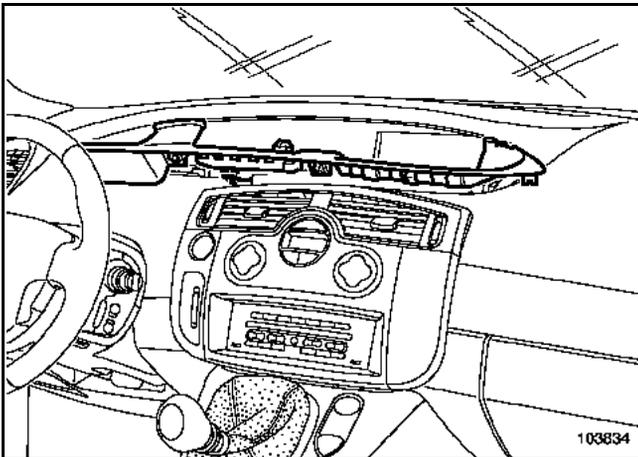

REMOVAL - REFITTING

Removing the navigation screen requires removing the instrument panel.

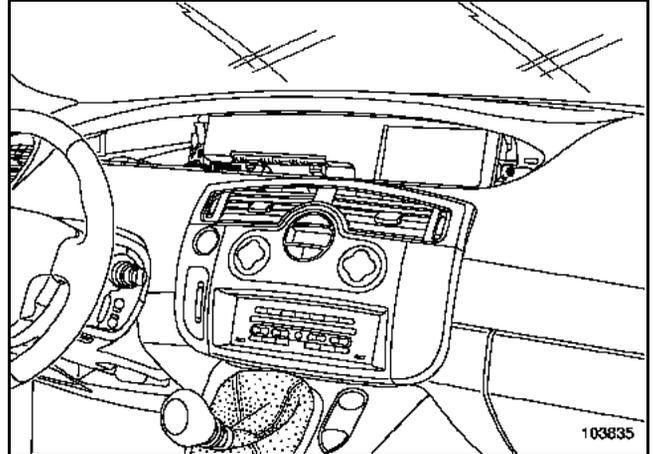

Disconnect the battery.

Unclip the trim (1) with the tool (Car. 1597).

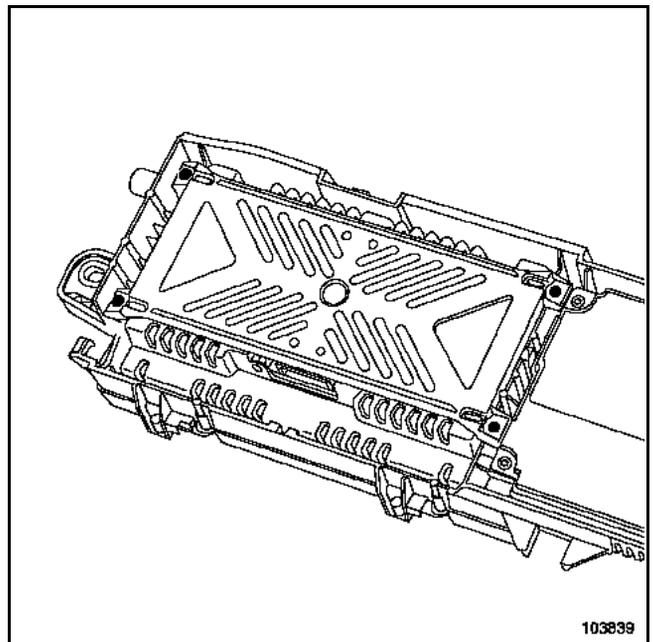

Unclip the instrument panel rim (2).

Remove the mounting bolts (3).

Remove the instrument panel.

Remove the screen mounting bolts (4).

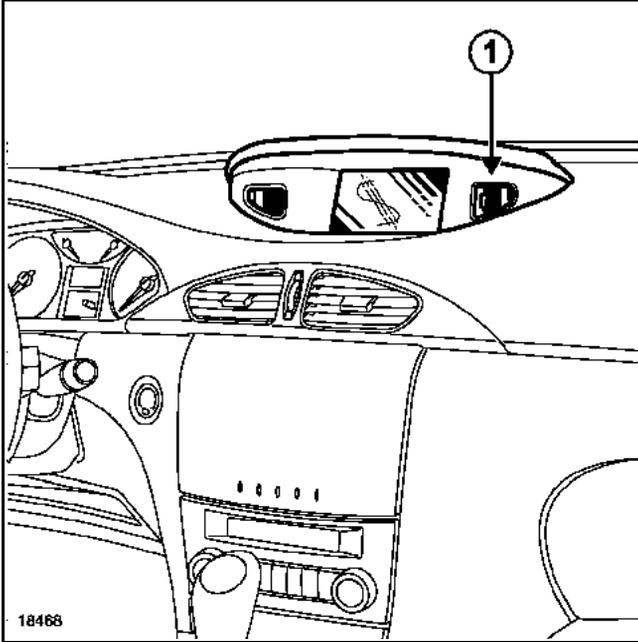

Remove the screen.

LAGUNA II

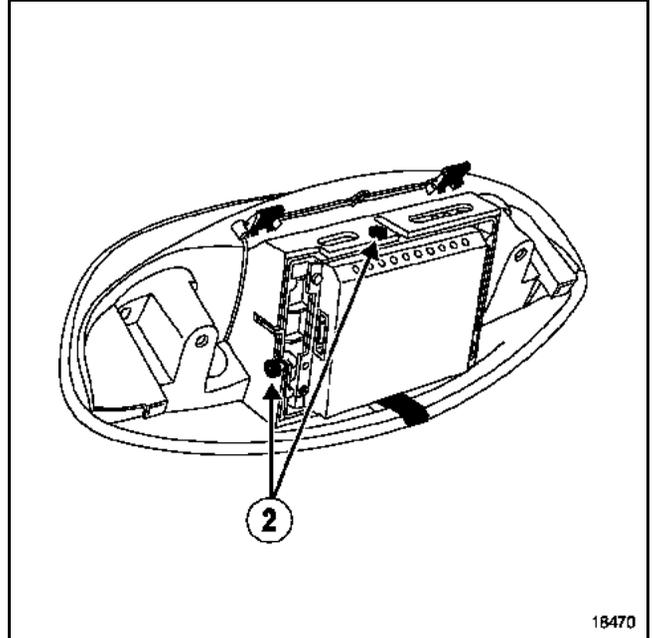

REMOVAL - REFITTING

With the ignition off, remove:

- the two covers either side of the screen,
- the mounting bolts (1),
- the underside of the screen by unclipping it (2).

Disconnect the connection with the computer.

Remove the screen mounting bolts to detach it from the support.

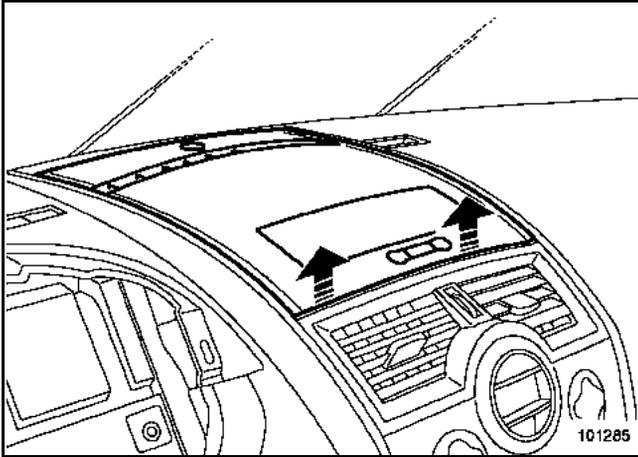

MEGANE II

SCREEN AND CENTRAL DISPLAY UNIT

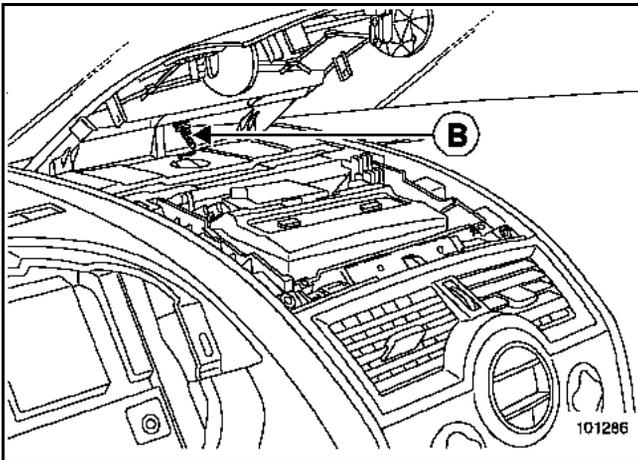

REMOVAL

The screen and the Central Display Unit are in one piece.

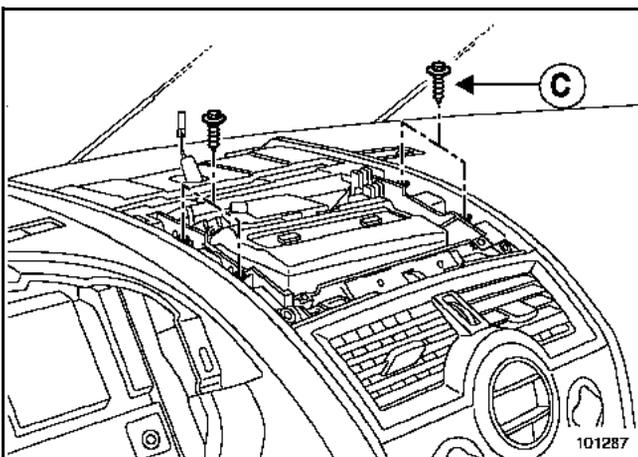

Unclip the upper section (A) of the dashboard.

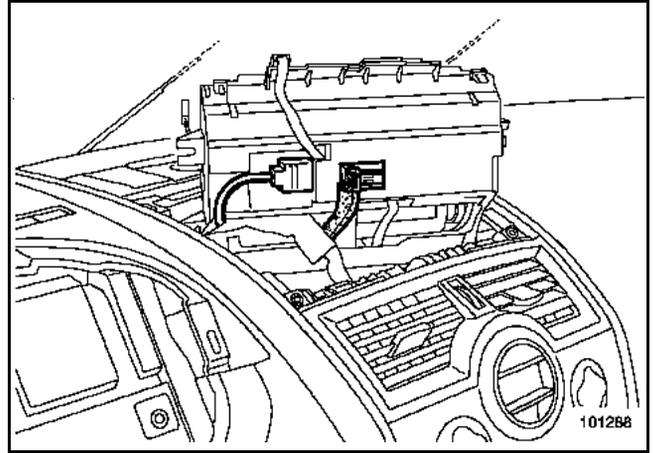

Disconnect the sunlight sensor (B).

Remove the four screws (C).

Disconnect the connectors.

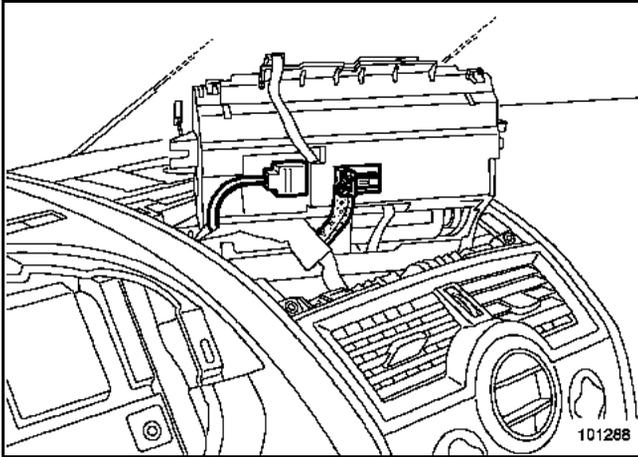

REFITTING

Proceed in the reverse order to removal.

Initialise the system (refer to the **Initialisation** section).

MEGANE II

CENTRAL DISPLAY UNIT CONNECTIONS

13	Multimedia multiplex link to screen
14	Multimedia multiplex link to screen
15	Multimedia multiplex link to Central Communications Unit
16	Multimedia multiplex link to Central Communications Unit
17	On/off input to Central Communications Unit
18	On/off input to screen

Note:
The screen connections are the same as in other vehicles.

AVANTIME

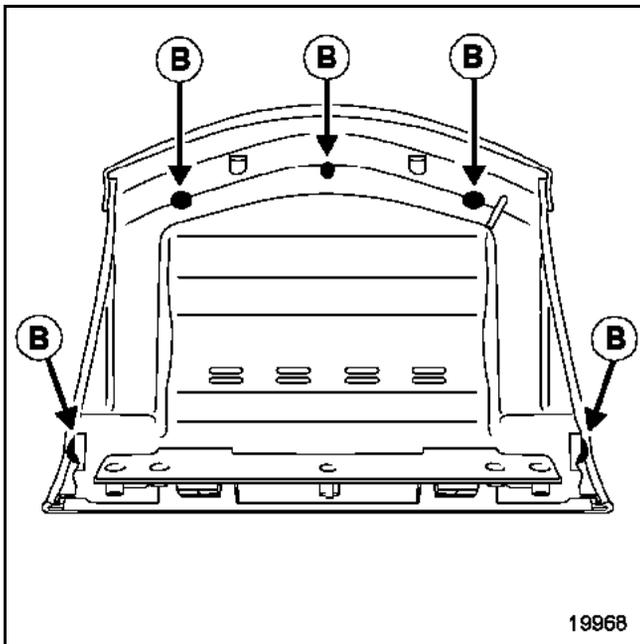

REMOVAL

Open the glovebox and remove the mounting bolts (A) from the screen mounting.

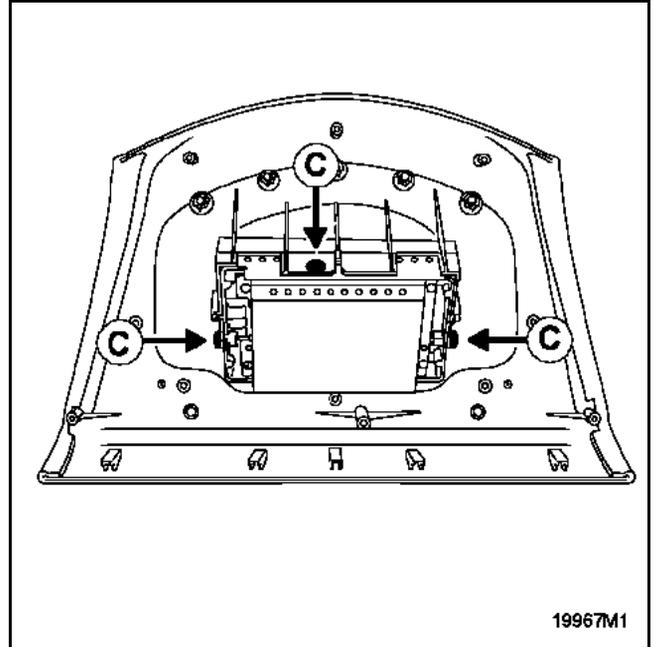

Pull out the assembly to the whole length of the wire so that it can be put back.

Remove the mounting screws (B).

Disconnect the connector.

Remove the screen mounting bolts (C).

REFITTING

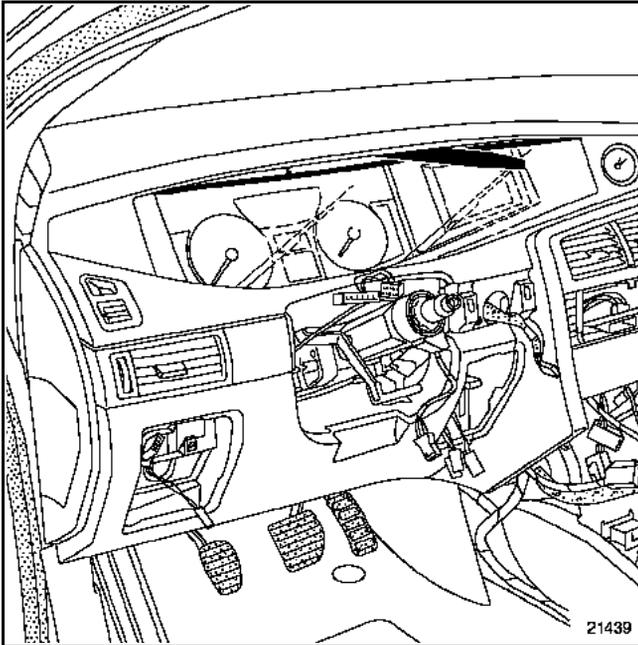

It is essential to respect the position of the screws according to their length.

VEL SATIS

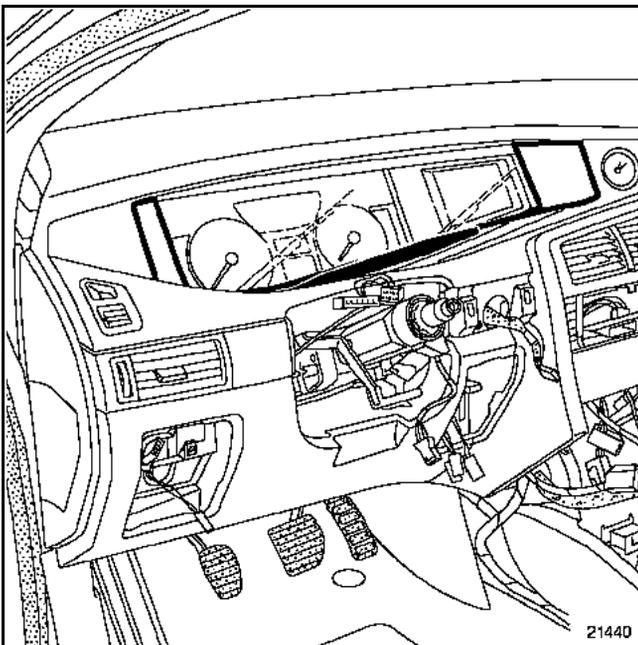

REMOVAL - REFITTING

The instrument panel must be removed to remove the screen.

Remove the upper instrument panel trim clipped to the dashboard.

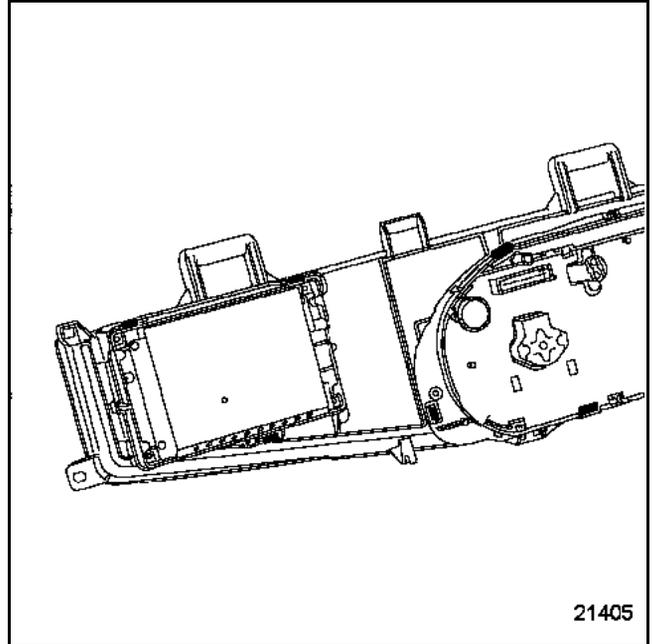

Remove:
– the lower instrument panel trim clipped to the dashboard,

Remove:

- the instrument panel mounting bolts.
- the screen mounting bolts on the instrument panel.

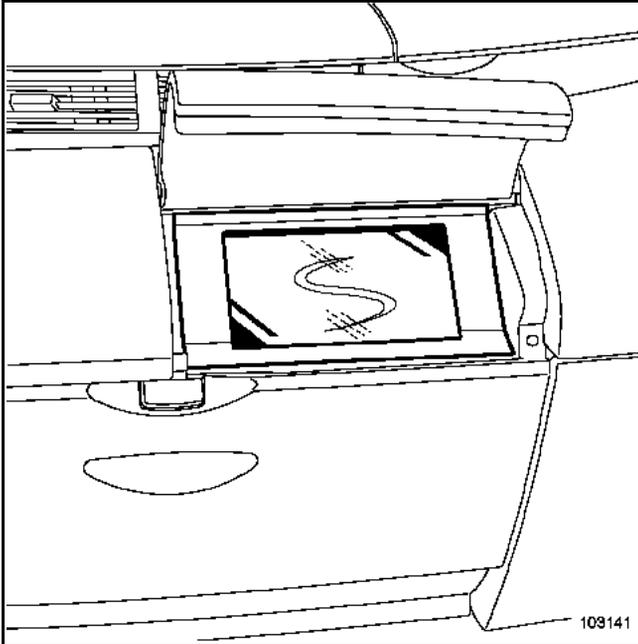

21405

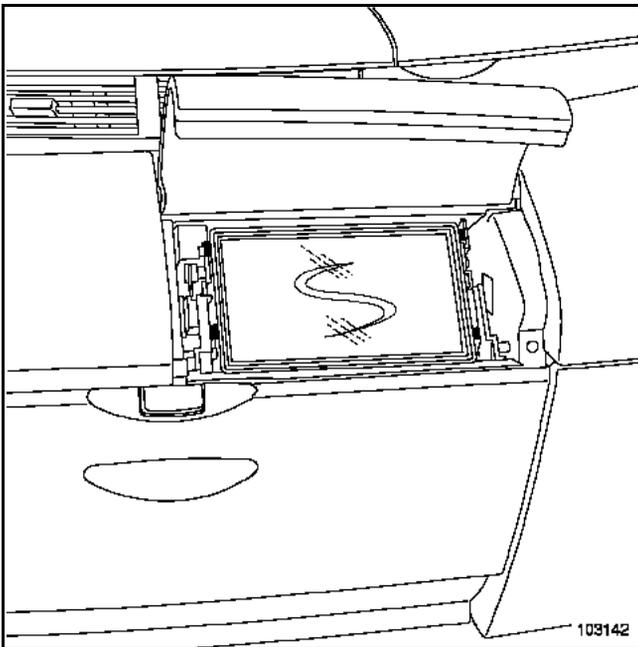

ESPACE IV

REMOVAL - REFITTING

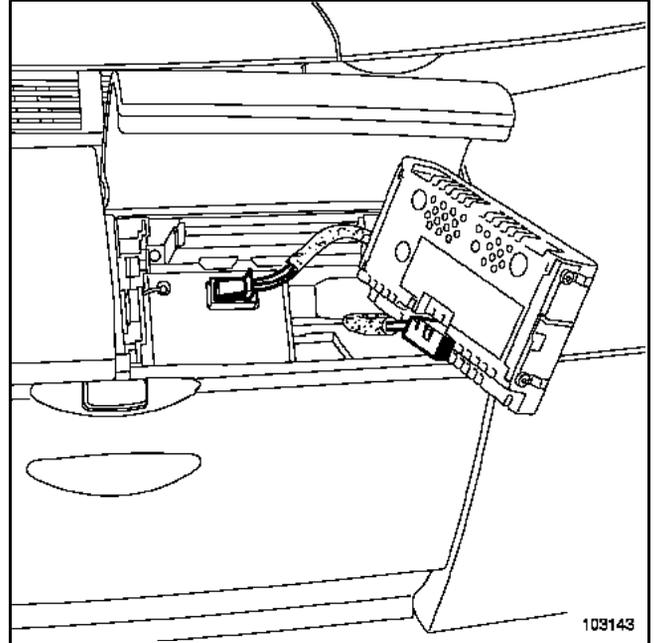

Using a flat screwdriver, unclip the cover.

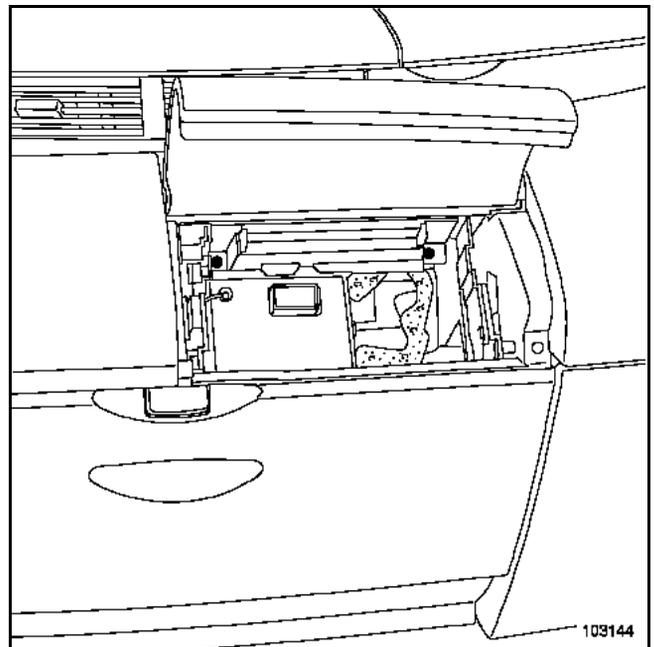

With a screwdriver, remove the clips (A) on each side of the screen.

Disconnect the connectors (F).

Remove the two screen mounting screws (D).

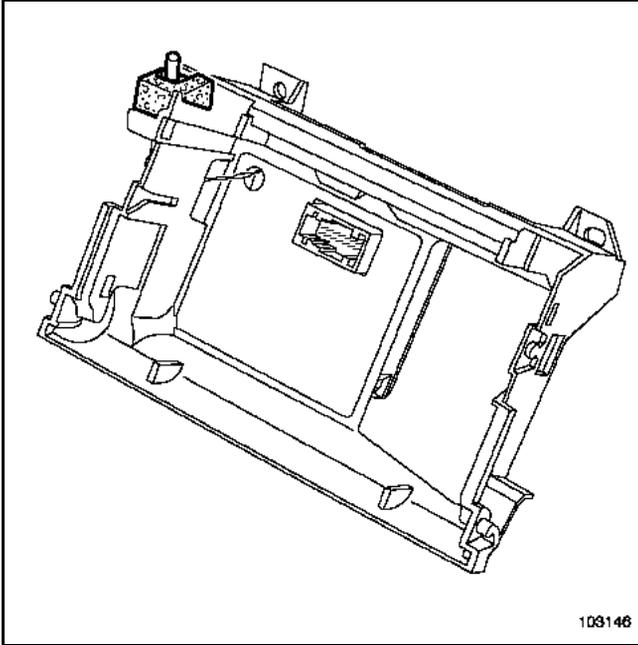

Take out the screen mounting.

ESPACE IV

Note:

The screen mounting has a switch (**B**) that turns off the display when the dashboard cover is closed.

The satellite aerial

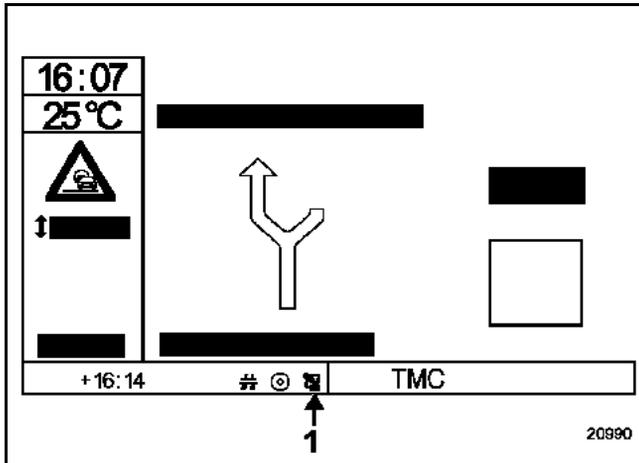

It picks up satellite signals so that the electronic navigation computer (CD-ROM player) can locate the position of the vehicle.

When the satellite reception is good, a **green** pictogram (1) is displayed on screen.

When the satellite reception is poor (caused by going through a tunnel or along a street surrounded by tall buildings, etc.), a **red** pictogram is displayed on screen.

Note:

Relocation is automatic once the battery has been reconnected or the navigation computer has been replaced: drive the vehicle to an outdoor open area with the ignition off and wait a few minutes. When the satellite reception is good, a **green** pictogram is displayed on screen.

**WARNING**

The satellite aerial wire is very fragile. Do not bend or trap it.

Note:

The satellite aerial is also used for the hands-free phone. Some vehicles are fitted with a dual band aerial.

CLIO II

REMOVAL - REFITTING

The aerial is fitted on the roof. The headlining and boot lining (right-hand side) must be partially removed to remove the aerial.

WARNING

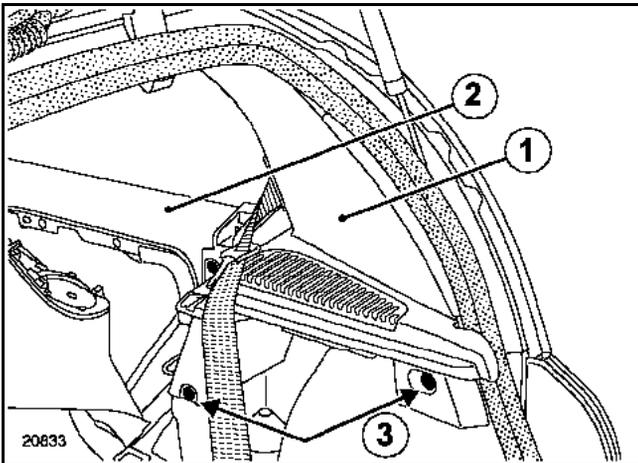

The **satellite** aerial wire is very fragile. Do not bend or trap it.

Note:

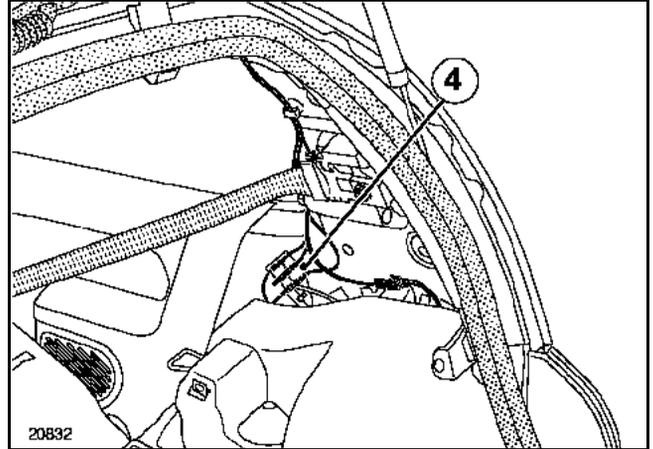

The satellite aerial incorporates the radio aerial and the telephone aerial (dual band).

Remove:

- the mounting bolts on the rear parcel shelf (3),
- the parcel shelf support,
- the linings (1) and (2).

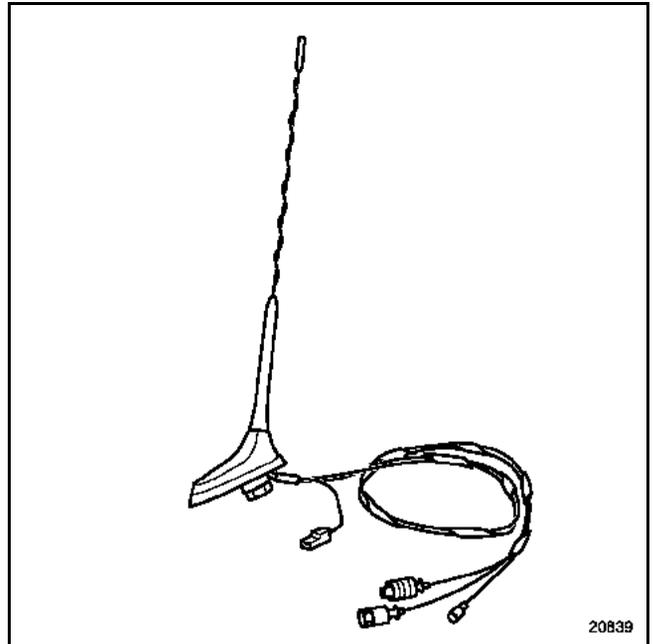

Disconnect the aerial wires.

Remove:

- the headlining (partially),
- the mounting nut, then remove the aerial.

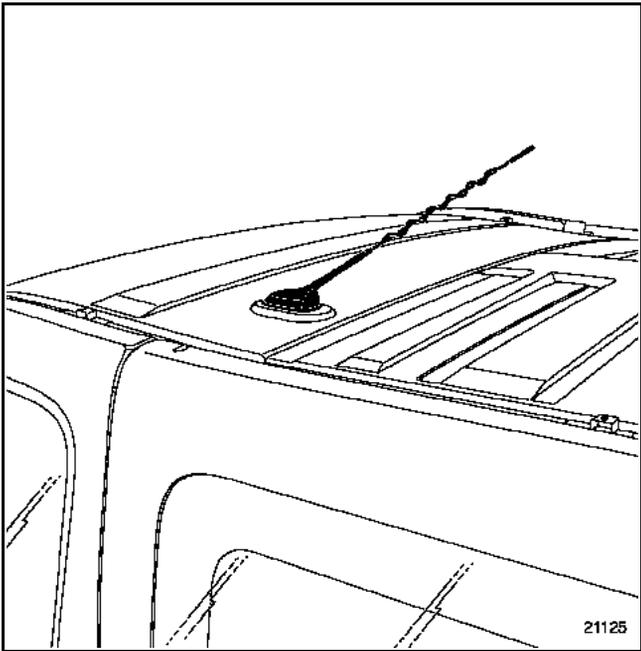

TRAFIC II

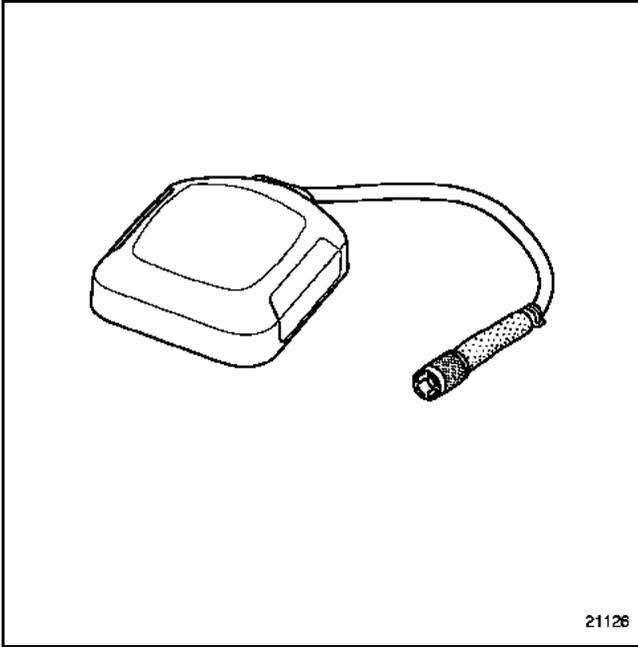

REMOVAL - REFITTING

The aerial is fitted on the roof. The headlining must be partially removed to remove the aerial.

WARNING
The **satellite** aerial wire is very fragile. Do not bend or trap it.

MEGANE - SCENIC

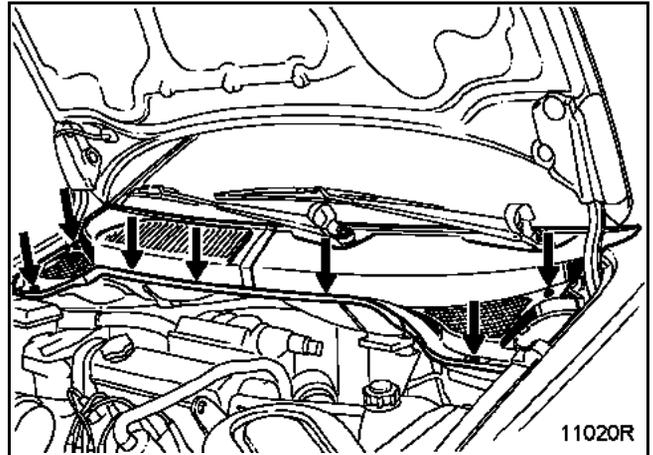

21126

Special notes on the Scénic

The aerial is located on the plenum chamber plate, underneath the engine cover.

Remove:

- the windscreen wiper arms,
- the plenum chamber half-grilles.

11020R

Disconnect the wire and detach the aerial.

WARNING

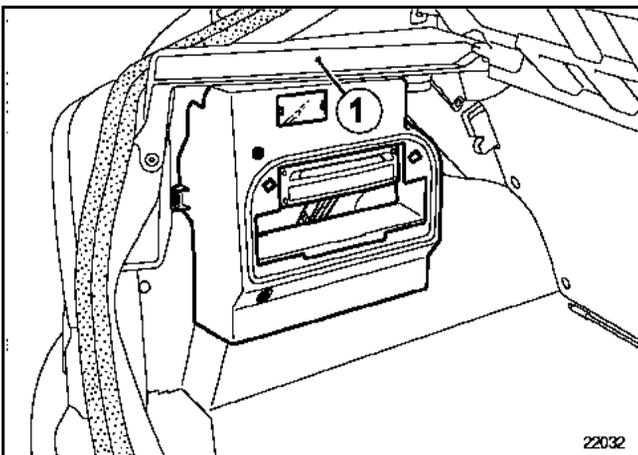

The **satellite** aerial wire is very fragile. Do not bend or trap it.

REMOVAL - REFITTING

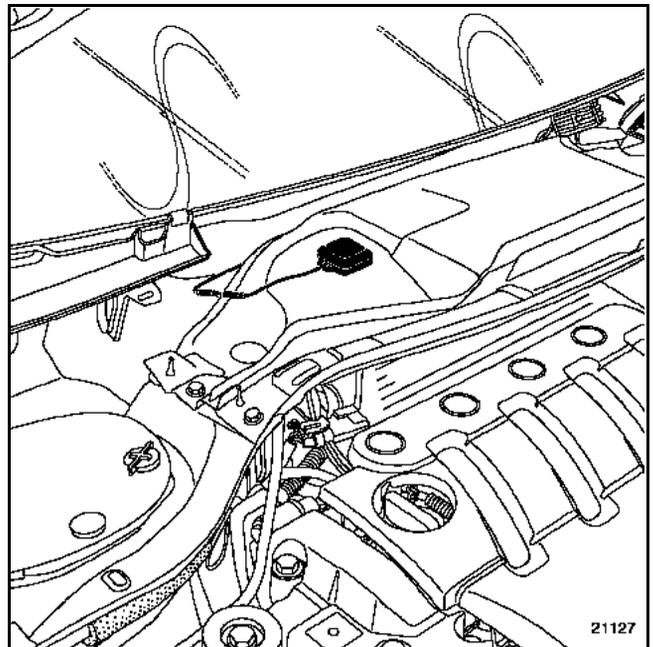

Special notes on the Mégane

The aerial (1) is located underneath the rear parcel shelf support (left-hand side).

Removing it requires removing the CD-ROM reader with the tool (Ms. 1373) as well as its mounting.

22032

21127

MEGANE II - SCENIC II

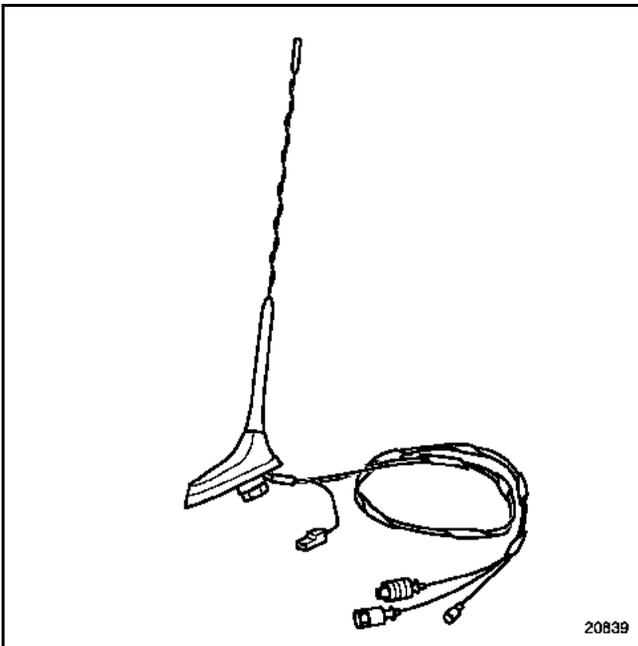

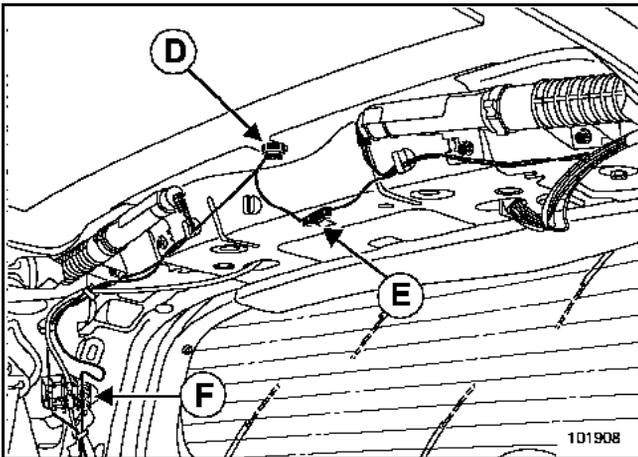

REMOVAL - REFITTING

The aerial is fitted on the roof. Removing it requires part of the head lining to be removed (see **Bodywork** section).

Note:

The satellite aerial incorporates the radio aerial, the amplifier and the telephone aerial (dual band).

Remove the marker nut (**D**) and disconnect connectors (**E**) and (**F**).

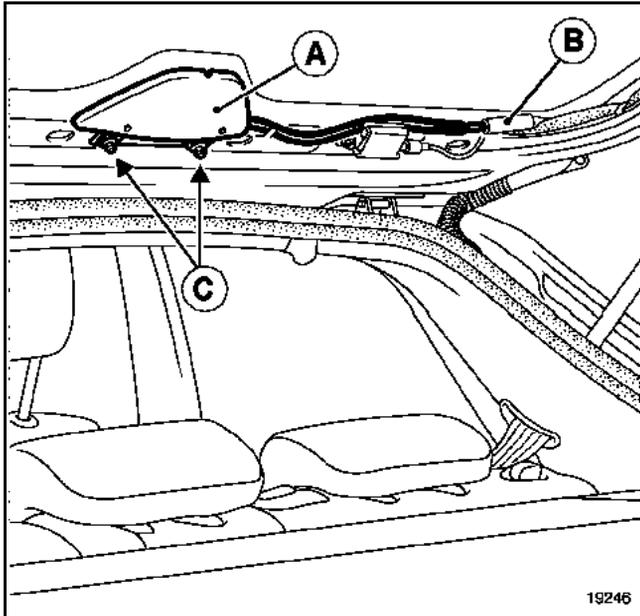

LAGUNA II

Special notes on the Laguna II

First-generation Laguna II's are fitted with a satellite aerial and a mono-band telephone. These aerials have been replaced by dual-band satellite and telephone aerials. They are visible on the rear section of the roof.

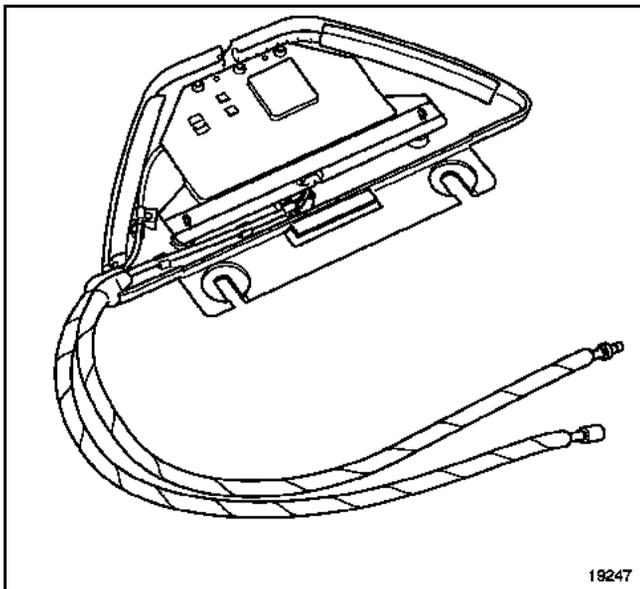

MONO-BAND AERIAL

Remove the upper tailgate lining.

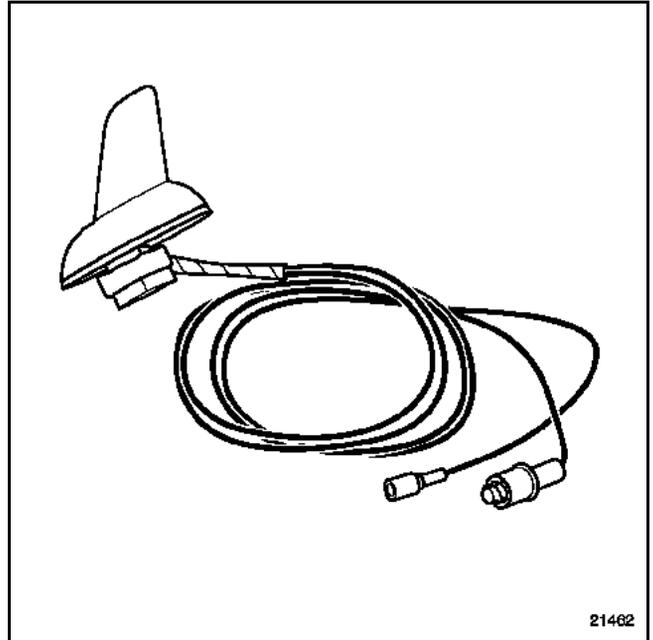

Disconnect the aerial connectors (B).

Remove the mounting nuts (C) and then the satellite aerial (A).

DUAL BAND AERIAL

The aerial is fitted on the roof. The head lining and rear right-hand quarter panel must be partially removed to remove the aerial.

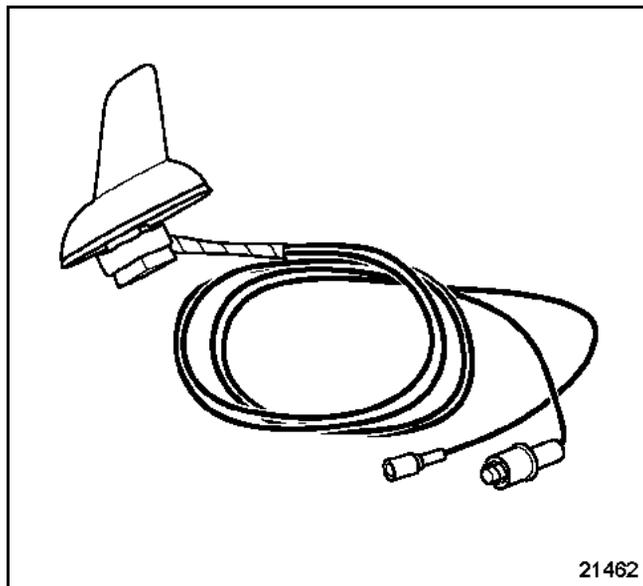

21462

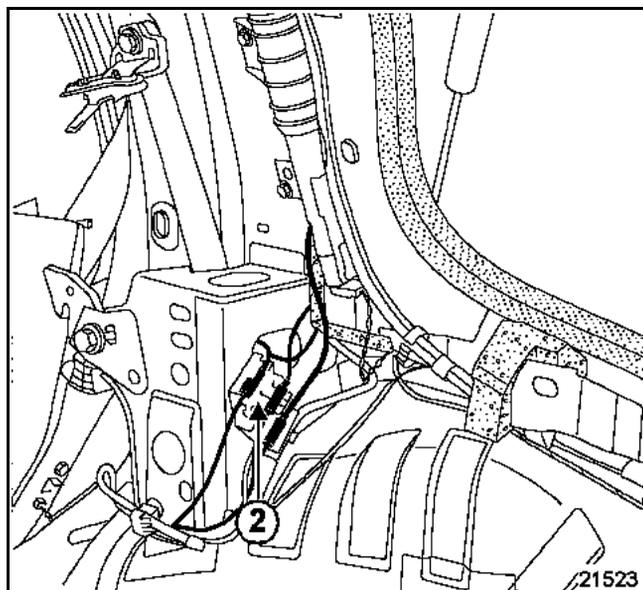

VEL SATIS - ESPACE IV

DUAL BAND AERIAL

The aerial is fitted on the roof. Removing it requires partial removal of the headlining and rear right quarter trim (see **Bodywork** manual).

The aerial wire is connected to the switch plate (2) (e.g. Vel Satis).

AVANTIME

REMOVAL

Lock the airbag computer using a fault finding tool.

Disconnect the battery.

Remove:

- the driver's seat,
- the central keyboard.

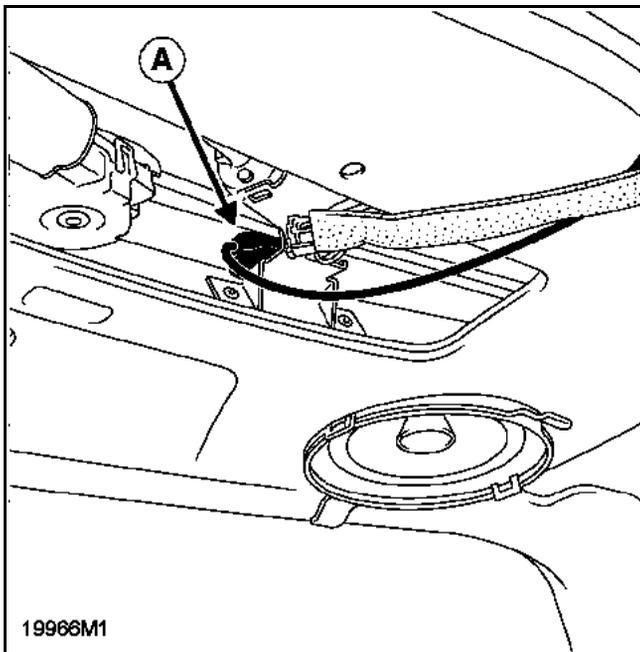

Remove the soundproofing material on the central keyboard tunnel,

Cut the carpet in the middle of the central keyboard in front of the gear lever,

Disconnect the satellite aerial wire at the threaded union.

Detach the carpet and soundproofing (driver's side),

Remove the satellite aerial sensor (**A**) from its housing by sliding it towards the centre of the roof,

REFITTING

Slide the satellite aerial into its housing.

Reposition the aerial wire along its original route and reconnect it.

Refit:

- the soundproofing,
- the carpet,
- the door seal,
- the central keyboard soundproofing material,
- the driver's seat.

Reconnect the battery.

Unlock the air bag computer and carry out fault finding.

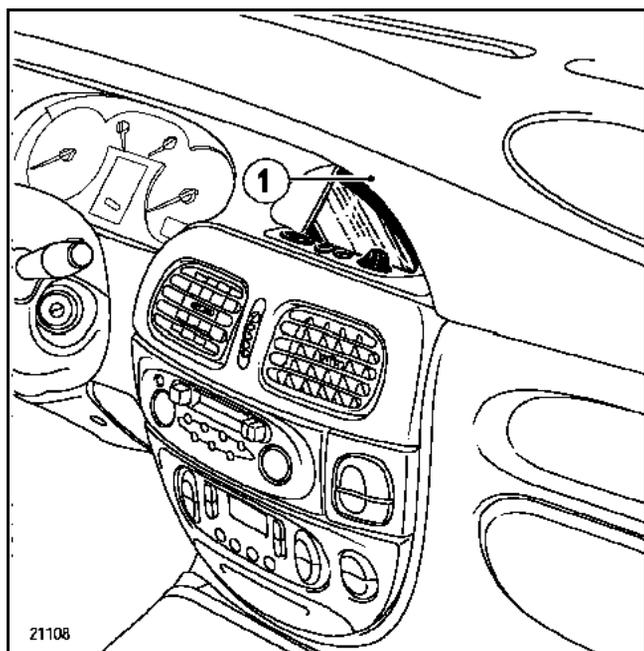

19966M1

The navigation system can use:

- a special speaker,
- the voice synthesiser speaker (the Central Communication Unit regulates the messages from the voice synthesiser),
- a radio speaker.

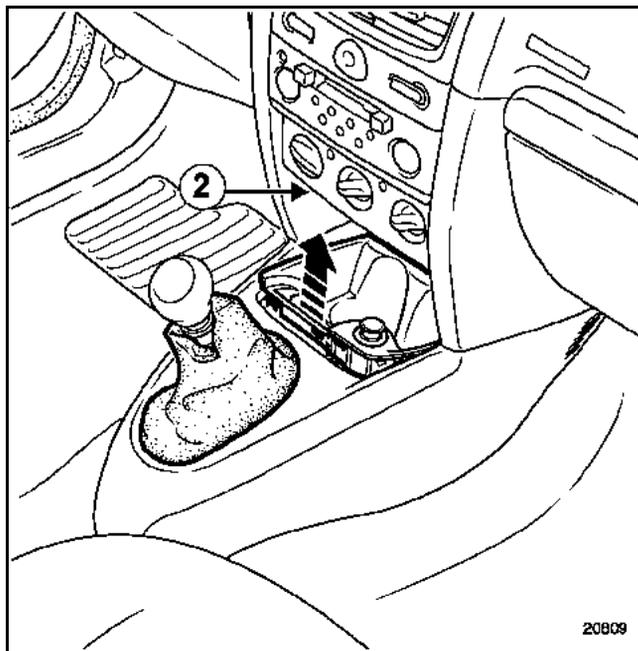

Special notes on the Mégane and Scénic

The special system speaker (1) is located beneath the upper section of the dashboard.

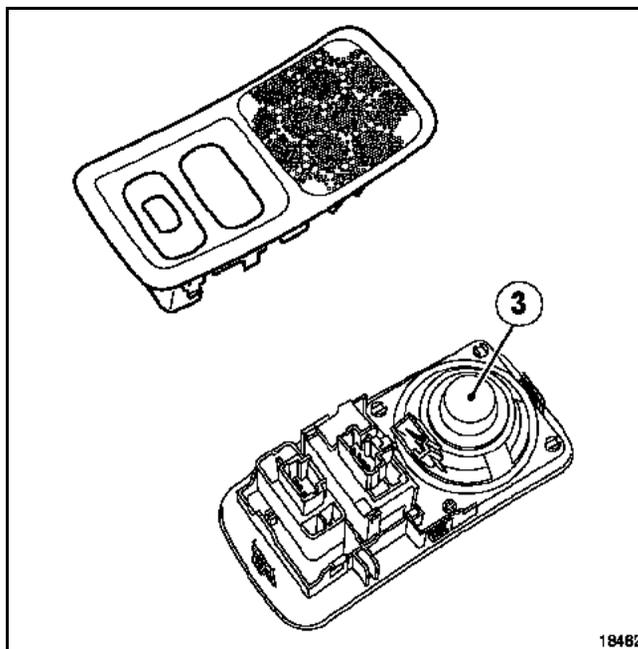

Special notes for Clio II

The special system speaker (2) is located beneath the heating control panel. The central keyboard compartment needs to be removed to remove the speaker.

Special notes on the Laguna II and Vel Satis

The speaker (3) is positioned in place of the voice synthesiser speaker.

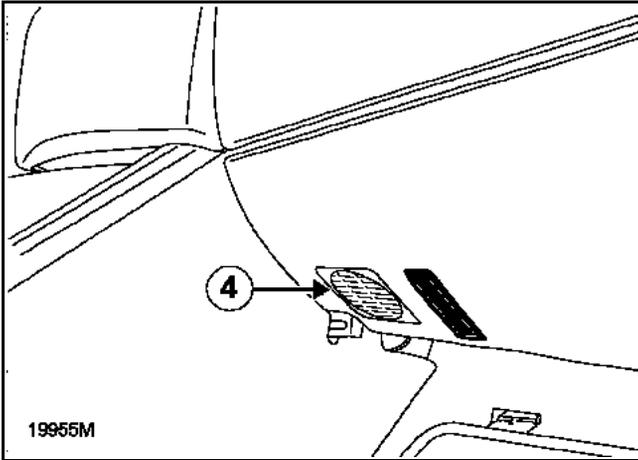

Special notes on the Trafic II

The speaker used for the navigation system is the front right-hand radio speaker.

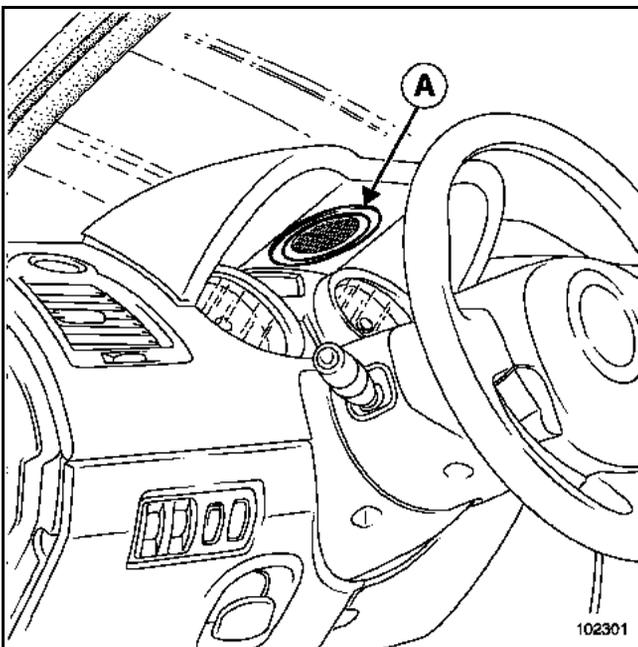

Special notes on the Avantime

The special system speaker (4) is positioned near to the central keyboard light.

Special notes on the Mégane II

The special system speaker (A) is located beneath the upper section of the dashboard.

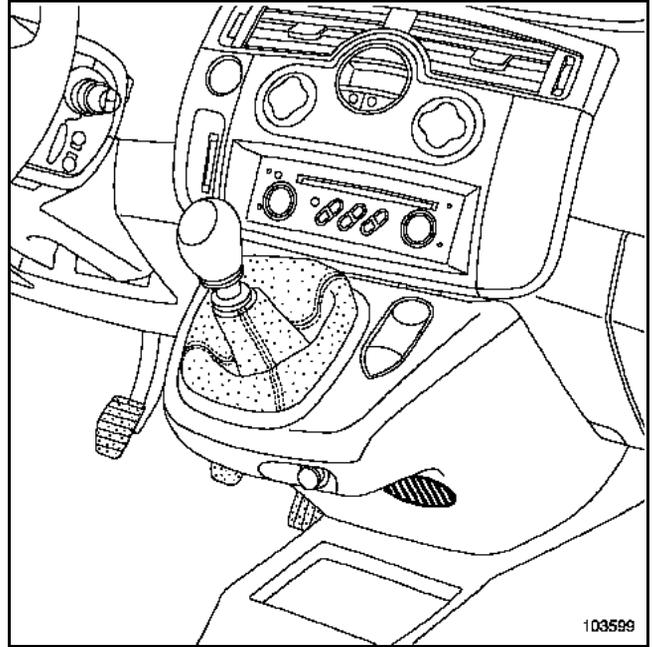

Note:

To remove it, unclip the upper section of the instrument panel (see Workshop Repair Manual 364).

Special notes on the Scénic II

To remove the speaker, remove the lower trim from the dashboard.

Special notes on the Espace IV

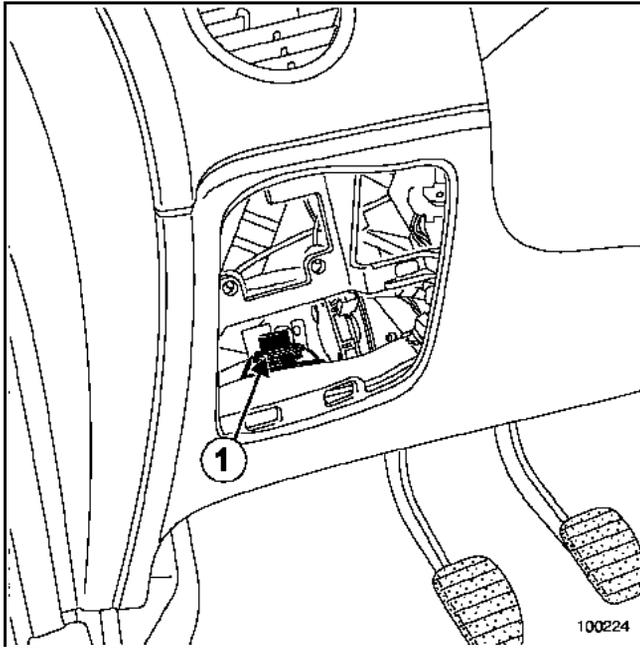

Vehicle with voice synthesiser.

The navigation speaker (1) is the same as the voice synthesiser one if the vehicle is equipped with both features.

Messages are controlled by the Central Communications Unit.

Vehicle without voice synthesiser.

The navigation speaker (1) is under the dashboard on the driver's side.

INITIALIZATION

This procedure must be followed every time a part is replaced.

WARNING

If the vehicle is fitted with a radio, it must be switched on during initialisation. If it is not, the steering wheel radio control will not function and the screen will not display radio data.

- 1 Switch off the ignition,
- 2 Wait until the system completely shuts down (about **1 minute**).
- 3 Switch the radio on,
- 4 Switch on the ignition (wait approximately **20 seconds**),
- 5 Press the buttons simultaneously (see table).
- 6 Read the vehicle part number (refer to the table).
- 7 Carry out the steering wheel control test,
- 8 The satellite aerial connection (connected / not connected to GPS) appears on the screen,
- 9 Ignore radio aerial and telephone tests,
- 10 Exit setting using the rotary switch,
- 11 Switch off the ignition (**1 minute**).

Note:

If the configuration does not correspond to the vehicle, check the vehicle wiring (multiplex lines) and the part numbers of the components.

Upgrading the navigation CD-ROM reader software takes about **5 minutes**.

If the CD-ROM is ejected during installation, carefully clean it, then reinsert it into the reader. The system will restart automatically.

- 1 Switch on the ignition without starting the engine.

WARNING

Do not switch off the ignition during this operation or the navigation system will become unusable.

- 2 Select **OK** on the Navigation system welcome screen.
- 3 Select **Navigation** from the main menu.
- 4 Eject the map CD-ROM by pressing the Eject button on the front of the CD-ROM reader. See the **Navigation Assistance** Technical Note for the location of the parts.
- 5 Insert the CD-ROM labelled **Languages CD - Nav5 All Versions**.
- 6 Once the CD-ROM has been detected (which takes a few seconds), the system asks: "**Install software?**".
- 7 Select **Yes** if the current version displayed and new version differ.

Note:

If both versions are identical, select **No**: the system already has the new software. The system then automatically ejects the **Languages CD - Nav5 All Versions**. Insert the map CD-ROM into the reader.

- 8 A wait message is then displayed for about **15 seconds** before the screen goes black.
- 9 After about 10 seconds, the system indicates it will update the software ("**The installation program will update your system**").

- 10 Wait approximately **2 minutes**. A **progress bar** appears. It enables you to track the progress of the software upgrade.

Note:

The "**progress bar**" may remain at 100% for a few seconds. This is normal system operation.

- 11 Once the upgrade is finished, the system automatically ejects the "**Languages CD - Nav5 All Versions**".
- 12 The system then reboots with a message: "**The system will reboot now**".
- 13 The screen goes black and the RENAULT logo appears.
- 14 Next the system displays the "**Navigation**" menu.
- 15 The system upgrade is now completed. Insert the map CD-ROM into the reader.

Note:

The "**Languages CD - Nav5 All Versions**" must be used instead of the old one to install new languages into the system.

The system will be programmed in French by default after the navigation computer has been replaced.

You must carry out these two operations to change the language:

● Change menus language

- 1 With the ignition switched on, press the eject button to remove the electronic navigation computer cartographic CD-ROM
- 2 The screen will display the message **No CD in reader**.
- 3 Confirm **OK** by pressing the rotary knob.
- 4 Select the **Language** menu.

● Change voice messages

- 1 With the ignition switched on, press the eject button to remove the electronic navigation computer cartographic CD-ROM
- 2 The screen will display the message **No CD in reader**.
- 3 Confirm **OK** by pressing the rotary knob.
- 4 Select the * **Configurations** menu then **Language**.

Note:

If the desired language does not appear in the menu, do the following:

- 1 Select **other language**.
- 2 The system prompts you to insert the language CD-ROM.
- 3 Insert the CD-ROM, and then press the rotary knob to confirm.
- 4 Select the language to be replaced (language 1 or 2) by turning the knob.
- 5 Use the rotary knob to select the language to load from the list of available languages stored on the CD-ROM and then confirm **load**.
- 6 Wait a few seconds. The screen will turn black and then white and display a message in black and red with a horizontal bar to show the loading time remaining.
- 7 When loading is complete, the language CD-ROM is ejected from the reader and **OK** is displayed on screen.
- 8 Continue with voice message changing procedure.
- 9 Reinsert the cartographic CD-ROM into the reader.

ON-BOARD TELEMATICS SYSTEM

The vehicle has to be relocated after the electronic navigation computer has been replaced or the battery disconnected.

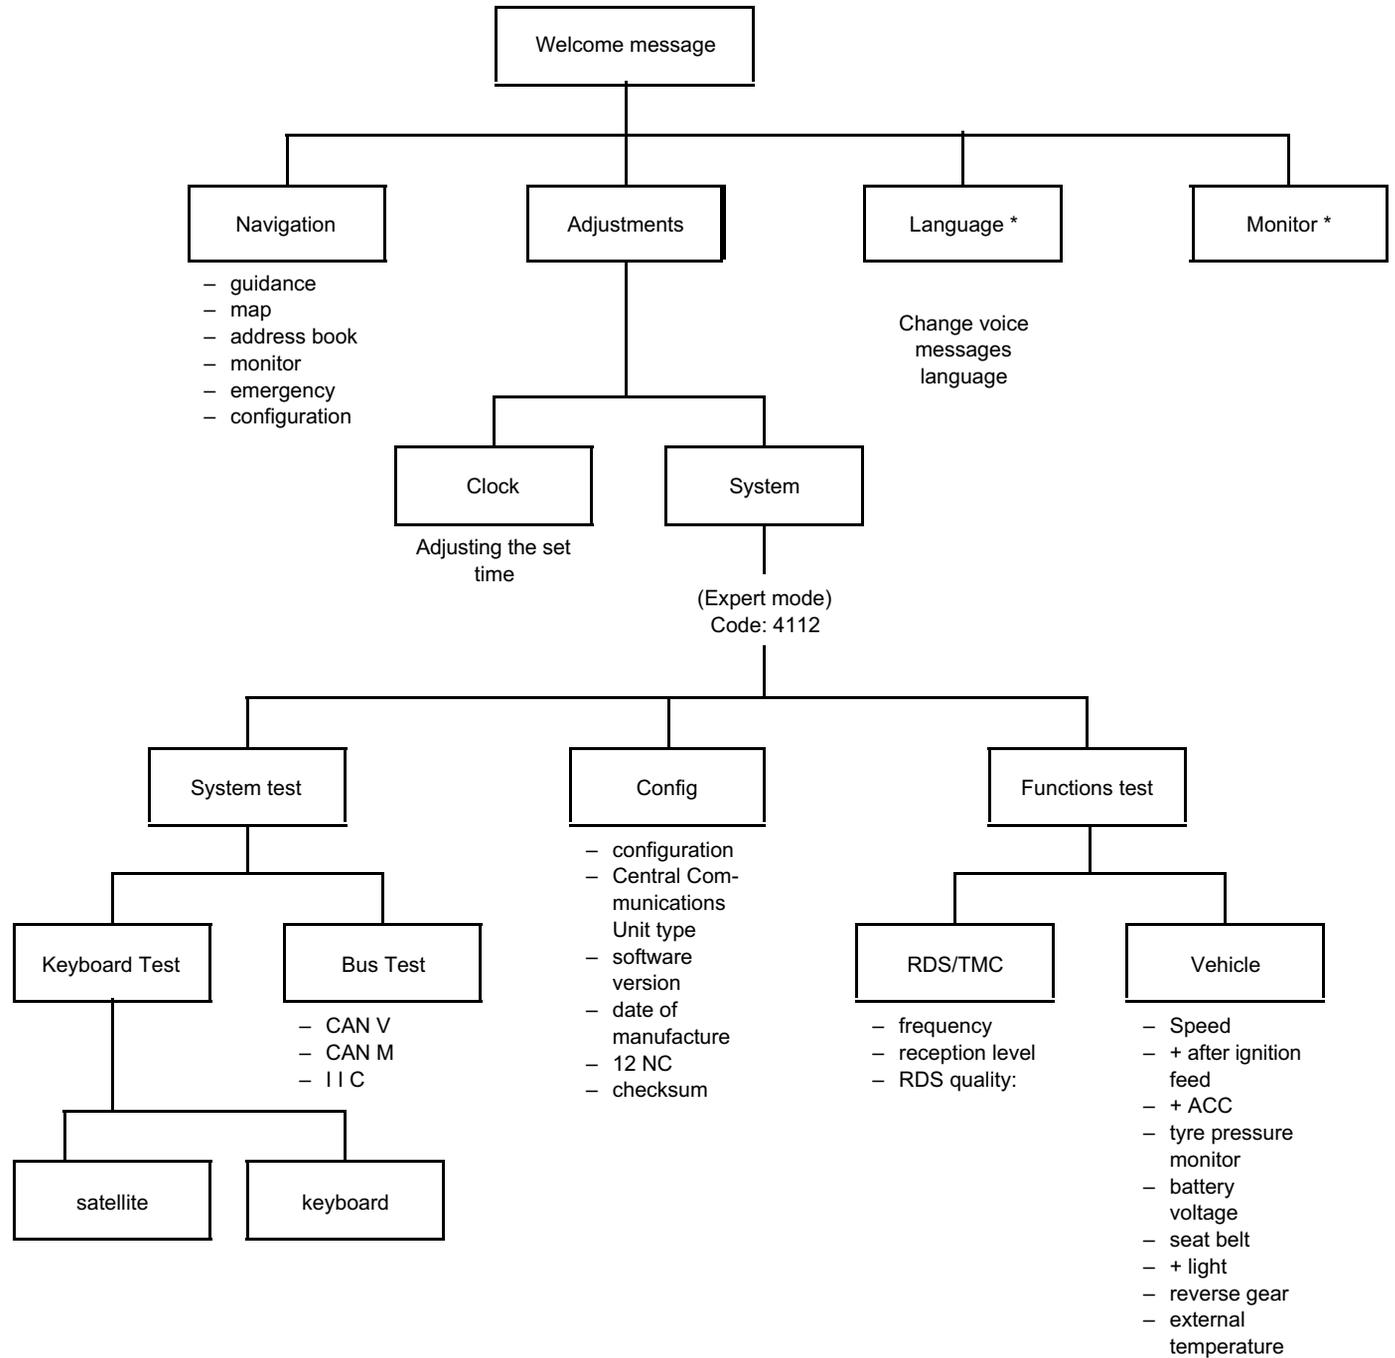

Drive the vehicle to an open area outdoors and wait for a few minutes with the ignition switched on.

When the satellite reception is good, a **green** pictogram (1) is displayed on screen.

If the vehicle is not correctly located on the map, drive the vehicle to along various main roads on the mapped routes (**0.6 to 1.8 miles (1 to 3 km)** necessary).

Note:
The localisation operation may take up to **20 minutes** maximum.

A

Check the connection between the Central Communications Unit and the navigation CD-ROM reader. Switch the ignition off for more than **1 minute**, then switch it on again. The navigation CD-ROM reader's red light should come on.

Does the red light come on?

yes

no

Check the navigation CD-ROM reader's power supply (track 6) on the Central Communications Unit grey connector (track 7):
 – ignition off = **0 V**,
 – ignition on = **12 V**.

Did it pass the tests?

yes

no

Check the connection between the navigation CD-ROM reader and the screen:
 – + **12 V** feed (tracks 15 and 16)
 – earth (tracks 2 and 9),
 – alarm feed (track 12) (on = **12 V** - off = **0 V**).

Did it pass the tests?

yes

no

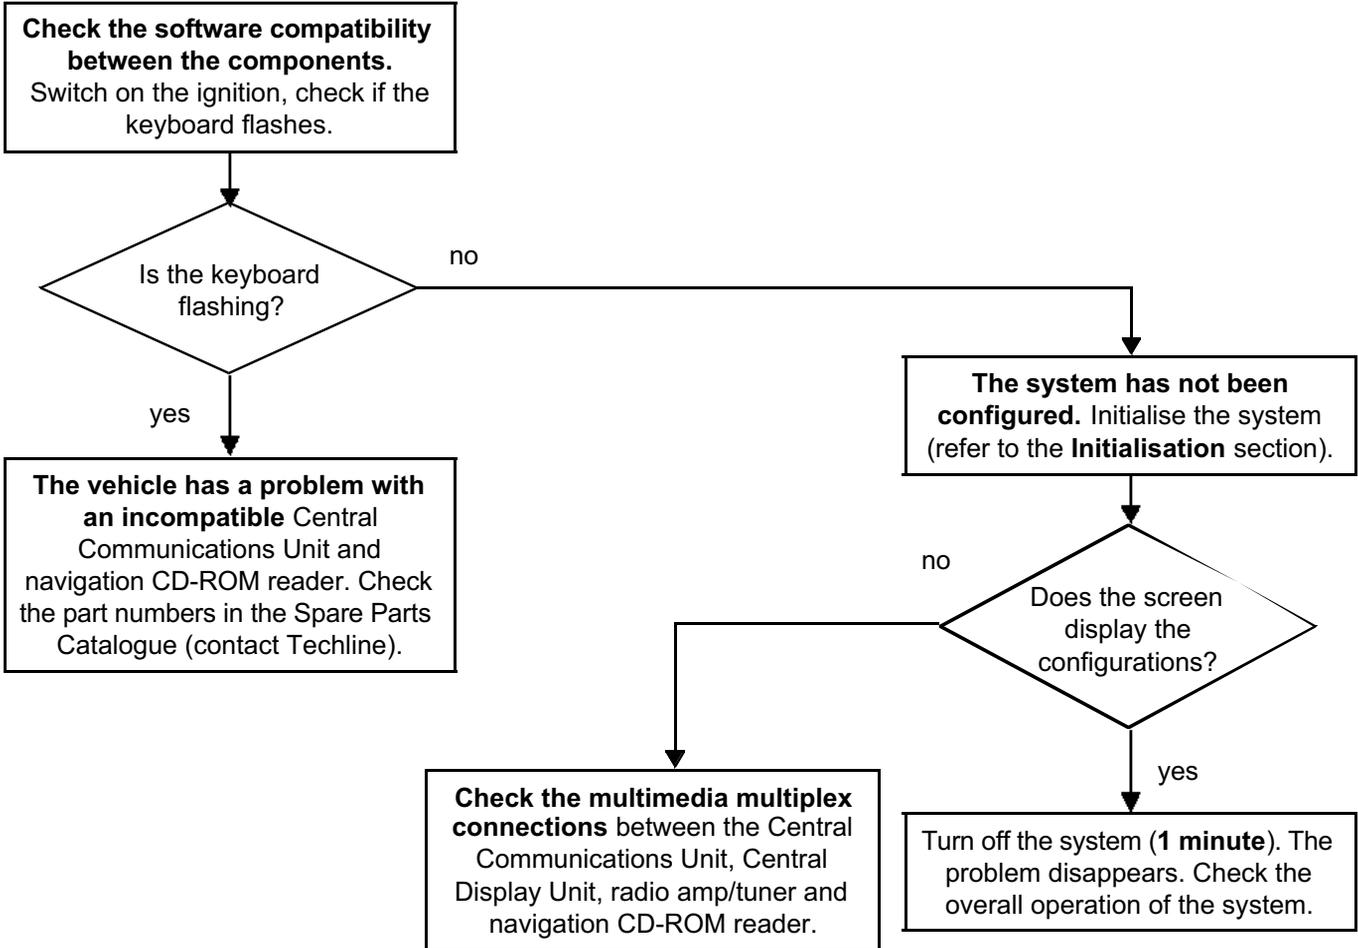

Check the wiring between the Central Communications Unit, Central Display Unit, and navigation CD-ROM reader.
 If the wiring is okay, replace the navigation CD-ROM reader after obtaining authorisation from Techline.

Replace the Central Display Unit after obtaining authorisation from Techline.

If the wiring is okay, **replace the screen** after obtaining authorisation from Techline.

If the wiring is okay, **replace the navigation CD-ROM reader** after obtaining authorisation from Techline.

CHART 4	Screen blank or frozen on RENAULT logo

CHART 5

The display on the screen stays fixed

The on screen display is frozen
(on a road map or other screen).
Turn off the ignition and wait until
the system shuts down completely
(**at least 1 minute**). Switch on the
ignition again.

Has the fault
disappeared?

no

yes

Given the system's complexity and
numerous functions, it may lock up
from time to time. If the fault is still
present, contact your Techline.

Check the multiplex link between
the Central Communications Unit
(tracks 3 and 4) and the Central
Display Unit (tracks 15 and 16).

Did it pass the
tests?

no

Repair.

yes

Check the multiplex link between
the CD-ROM reader (tracks 9 and
18) and the Central Display Unit
(tracks 15 and 16).

Did it pass the
tests?

no

Repair.

yes

Replace the navigation CD-ROM
reader after obtaining authorisation
from Techline.

EXCEPT MEGANE II

CHART 5

The display on the screen stays fixed

The on screen display is frozen
(on a road map or other screen).
Turn off the ignition and wait until
the system shuts down completely
(**at least 1 minute**). Switch on the
ignition again.

Has the fault
disappeared?

no

yes

Given the system's complexity and
numerous functions, it may lock up
from time to time. If the fault is still
present, contact your Techline.

Test the multiplex link between
the Central Communication Unit
&newln (tracks 3 and 4) and the
CD-ROM reader (tracks 9 and 18).

Did it pass the
tests?

no

yes

Repair.

Replace the navigation CD-ROM
reader after obtaining authorisation
from Techline.

CHART 6	The screen displays "configuration error"
----------------	--

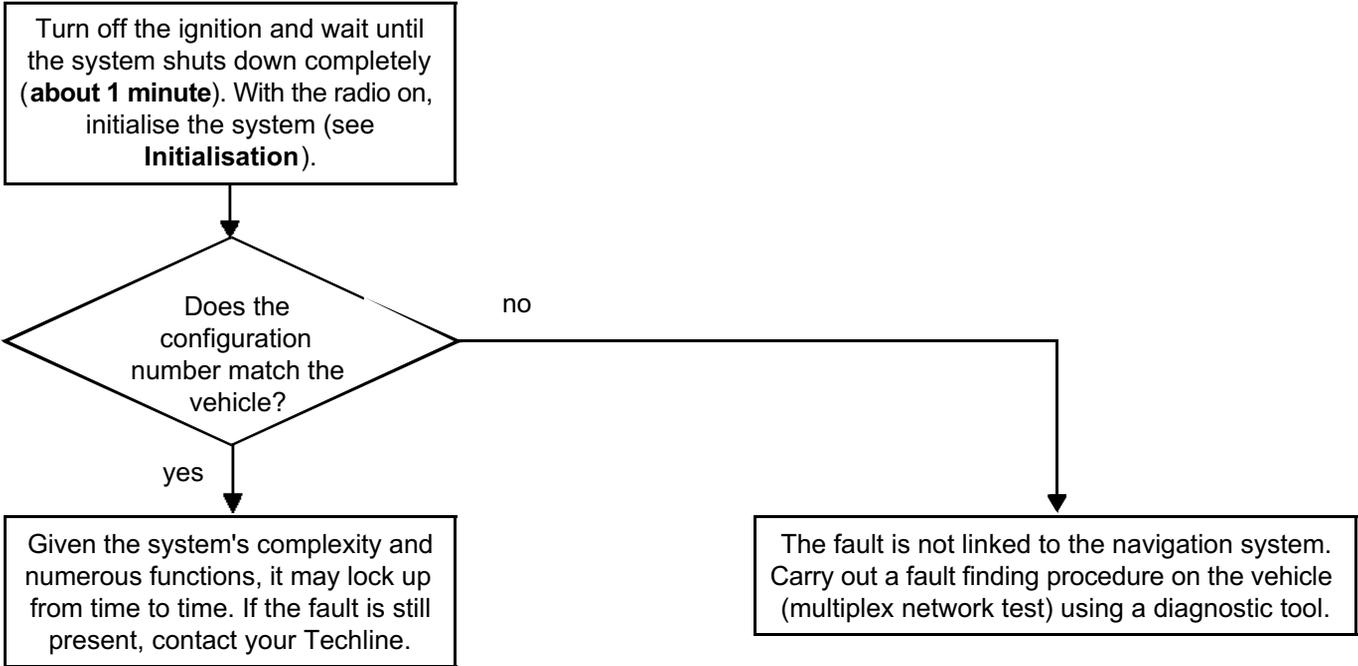

CHART 7	No radio display on the Carminat screen or the screen display is frozen ("Entry Level" radio)
----------------	--

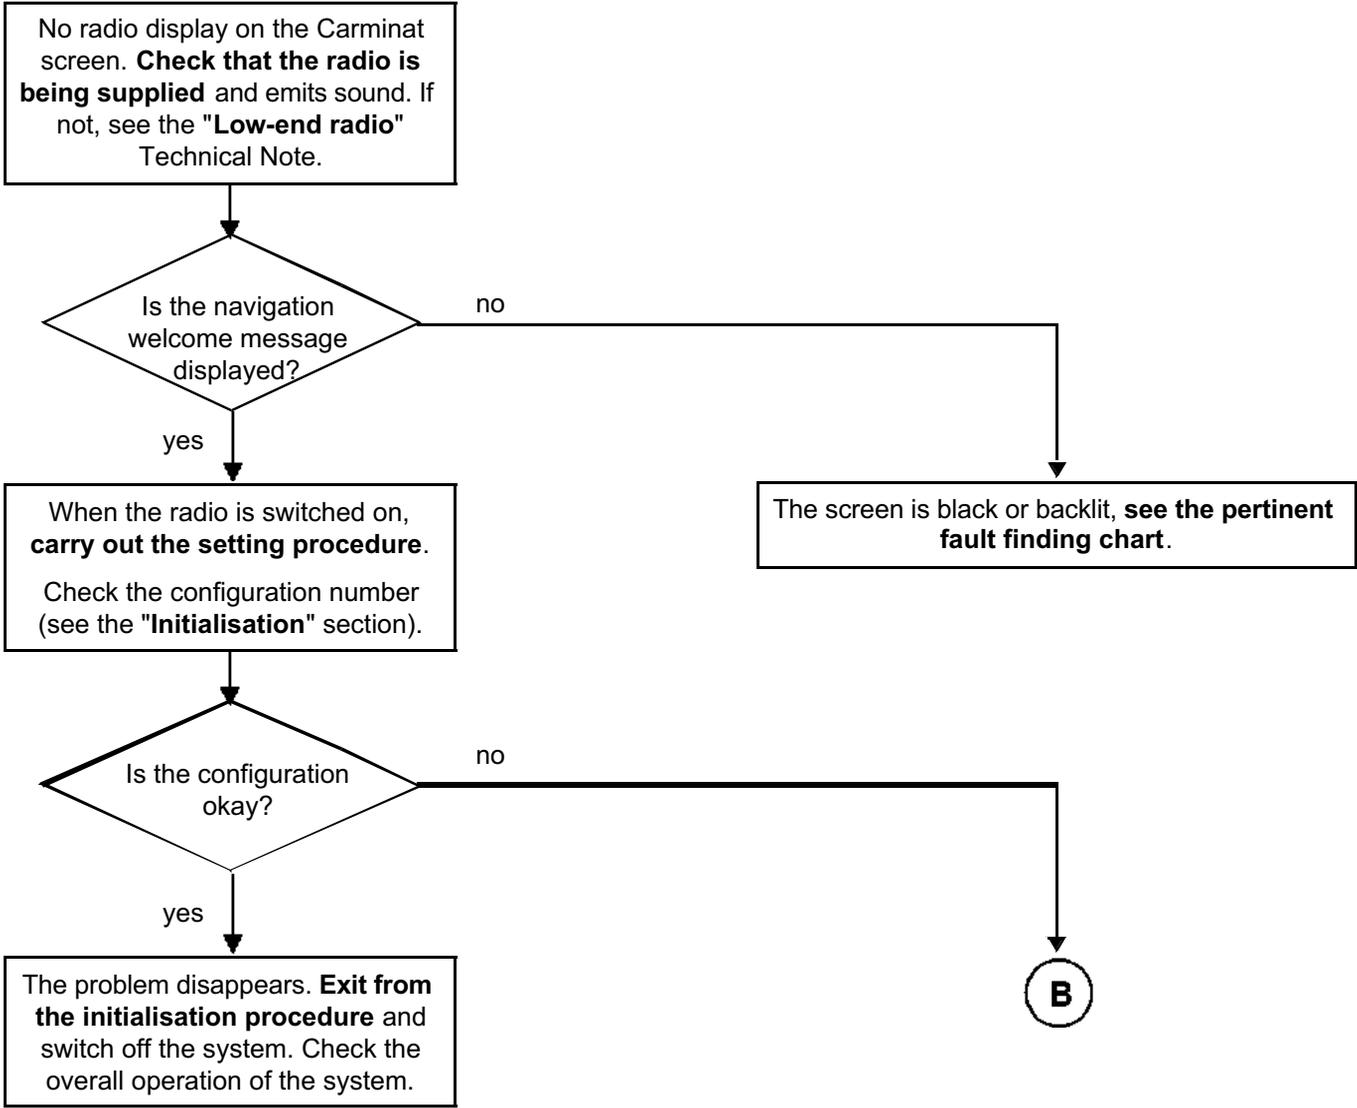

CHART 7 (continued)	
--------------------------------------	--

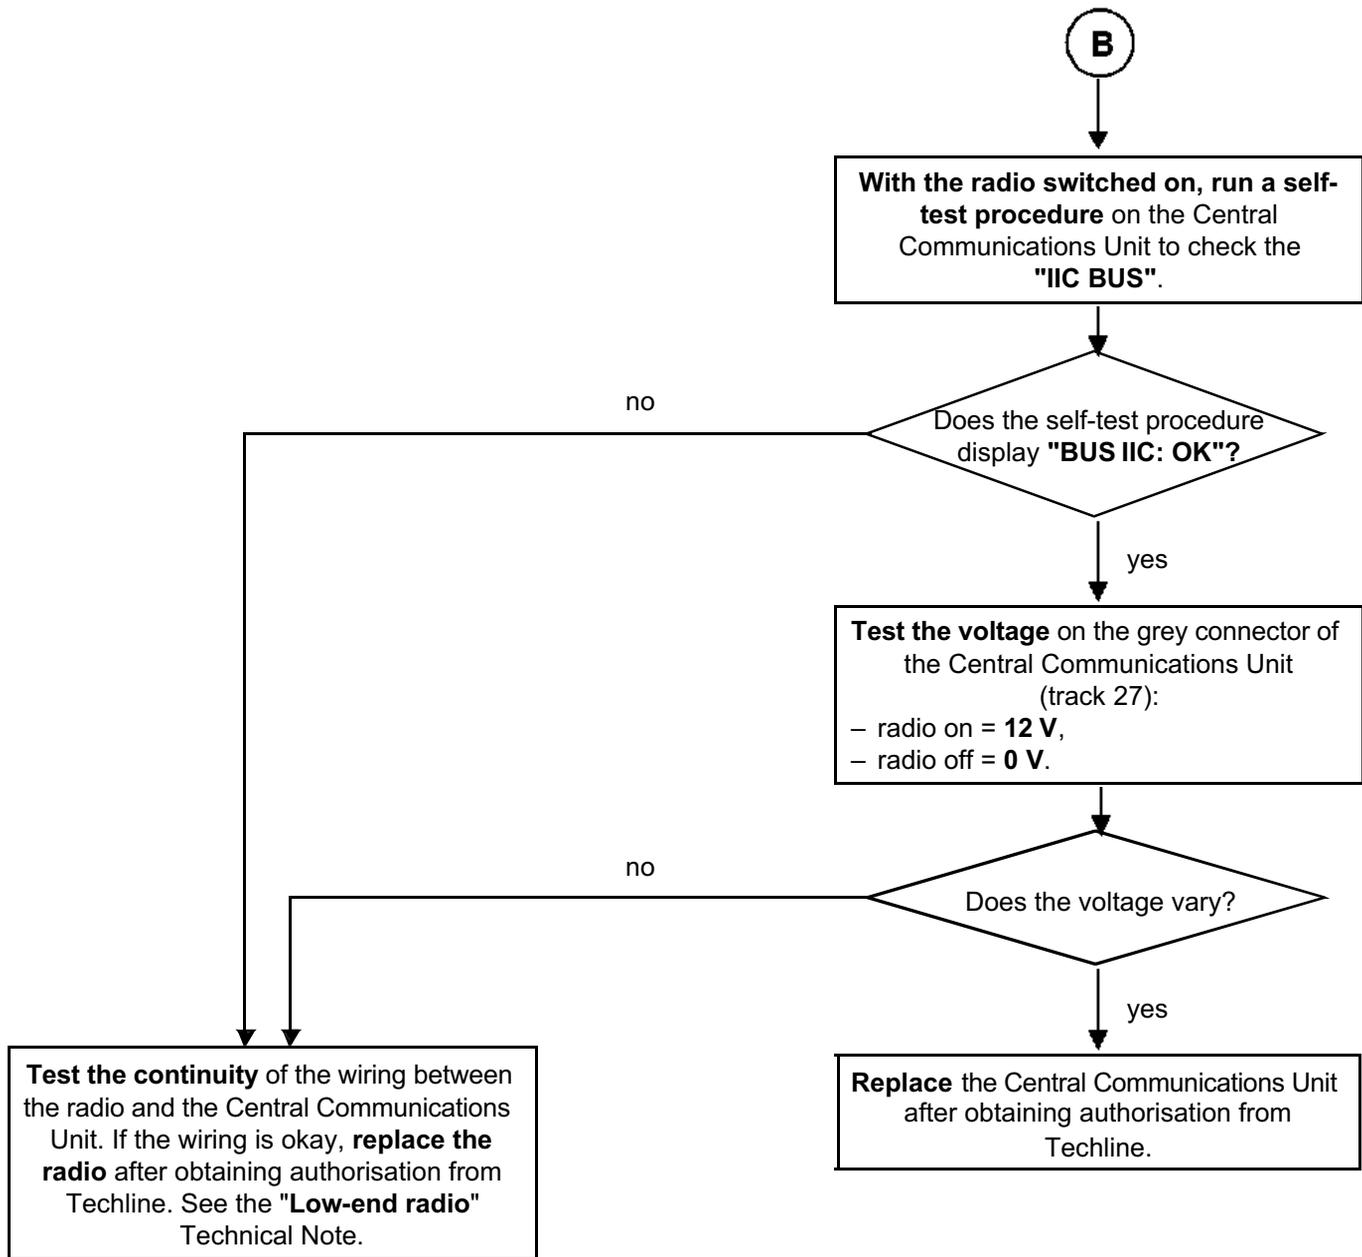

CHART 7	No radio display on the Carminat screen or the screen display is frozen ("Top of the Range" radio)
----------------	---

The Carminat screen is working except for the radio display. **Make sure the radio is receiving power** and emits sounds; if not, see the **"High-end radio"** Technical Note.

When the radio is switched on, **carry out the setting procedure**. Check the configuration number (see the **"Initialisation"** section).

Is the configuration okay?

The problem disappears. **Exit the initialisation procedure** and turn off the system for **at least 1 minute**. Check the overall operation of the system.

Test the voltage on the grey connector of the Central Communications Unit (track 27):
 – radio on = **12 V**,
 – radio off = **0 V**.

Does the voltage vary?

Check the continuity of the wiring between the amp/tuner and the Central Communications Unit, Central Display Unit, and navigation CD-ROM reader. If the wiring is okay, **replace the amp/tuner** after obtaining authorisation from Techline (see the **"High-end radio"** Technical Note).

Replace the Central Communications Unit after obtaining authorisation from Techline.

CHART 8	Wrong time displayed (see the Screen section for how to confirm the problem).
----------------	--

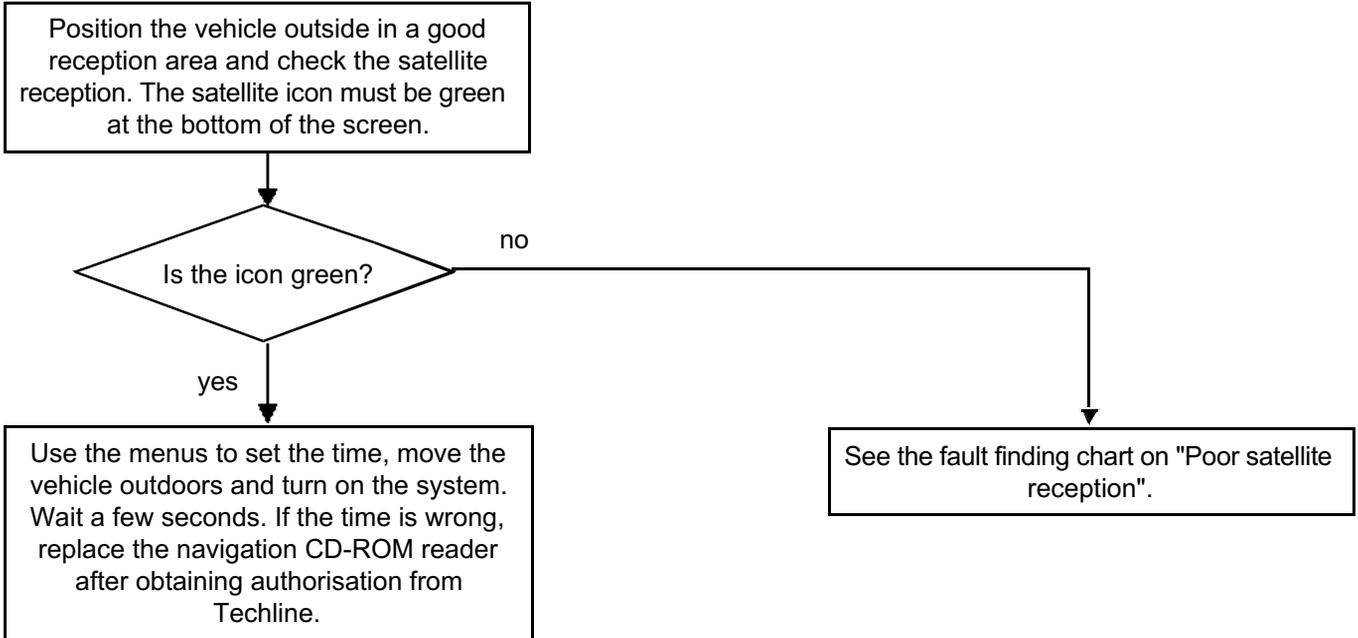

CHART 9	No time displayed (see the Screen section for how to confirm the problem).
----------------	---

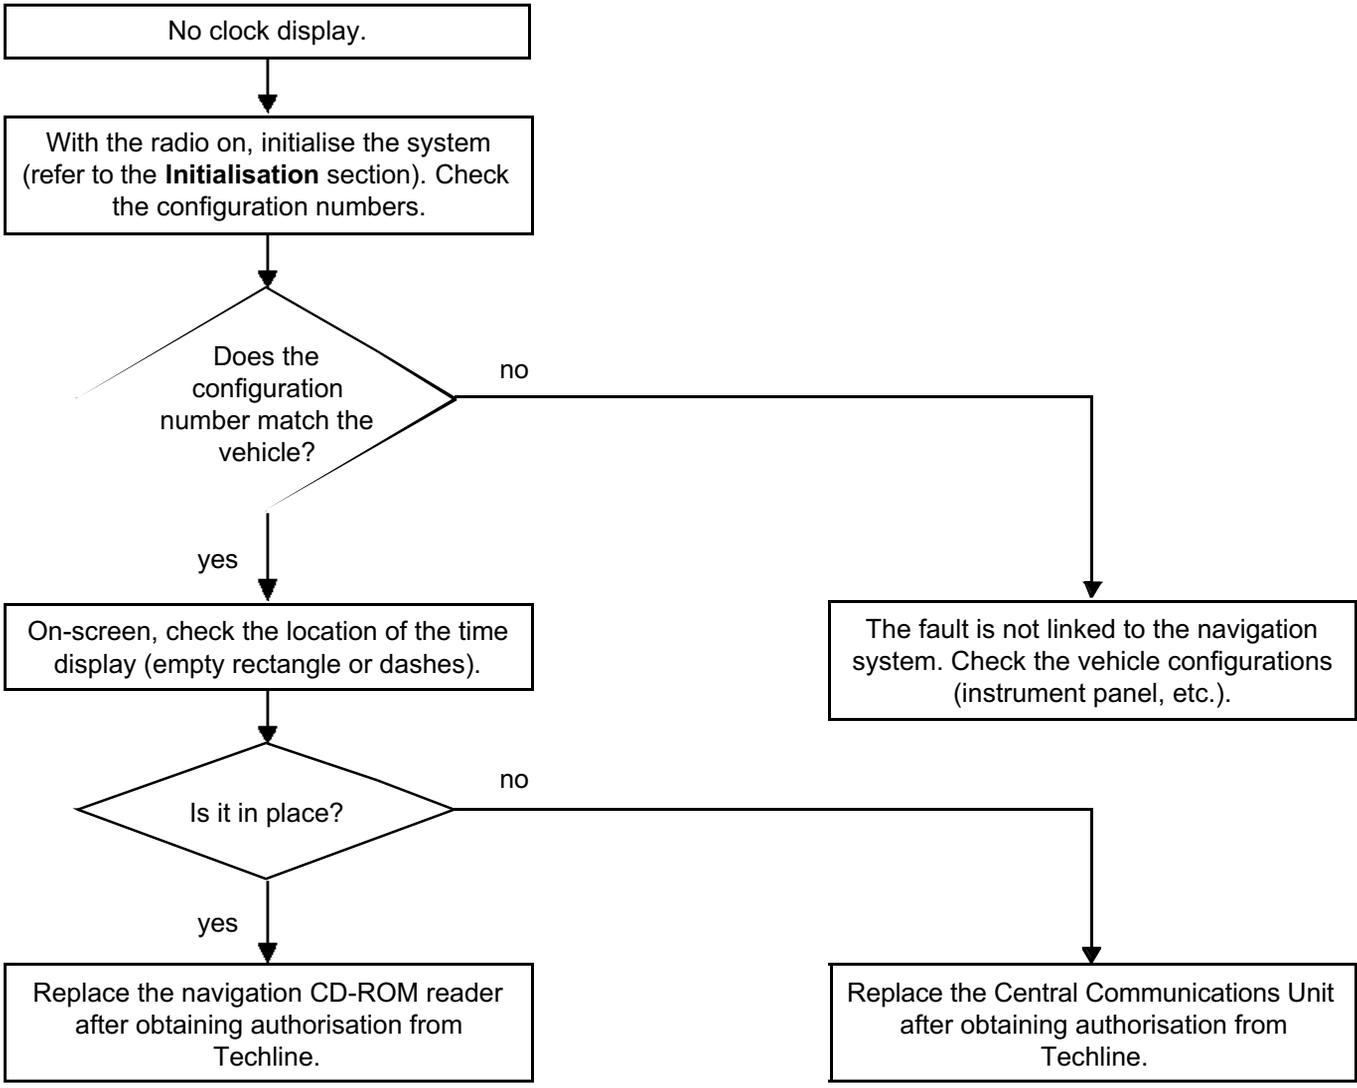

CHART 10	No tyre pressure system display (see Screen section for how to confirm the problem).
